

ALL SAINTS RC SCHOOL

12M X 18M 12 BAY TWO STOREY CLASSROOM BLOCK

"Britcab provided an excellent service from start to finish, the school is very happy with the building."

Stephen Young PPIY Limited, Chartered Architects

The school made an enquiry to us via a local architect and were more than happy with the quote and proposed layout we provided. The only available area was on the school playground with access to the first floor gained from a car park above.

The buildings were fully refurbished prior to delivery to site and installed from the top car park. The installation was difficult but good preparation and attention to detail meant it went without a hitch.

The buildings layout included various classrooms, toilets, offices and store rooms. The internal staircase provides access to both floors with external access gained from both the playground to the ground floor and car park for the first floor.

DURSTON HOUSE SCHOOL, EALING

9.6M X 30M 10 BAY SINGLE STOREY MODULAR BUILDING

"We required a professional company to help us and found that in Britcab. Their service was excellent."

Julia Maynard, Project Manager

This private school in the borough of Ealing required additional classroom space for one year only and turned to Britcab. They utilised part of their playing fields for the temporary building and used us for a turnkey package including:

- Foundations
- Steps & ramps
- Connection to services
- Paved courtyard
- Fencing

We also refurbished an existing building for them and provided a store for school equipment. The building was installed efficiently on time and on budget. The removal of the building has recently been undertaken and the building is now back in storage, ready for immediate delivery on its next project.
