

NETWORK RAIL, MELTON MOWBRAY

10.8M X 33M SINGLE STOREY MODULAR BUILDING

"A cracking job from start to finish"

Ian Vinton, Project Manager

A slow procurement meant the programme for this turnkey project was very tight but having reviewed carefully, Britcab committed to completing the building by the end of February 2015 and made sure that was the case. The contract included:

- Site clearance
- Foundations
- Connection to services
- Steps & ramps to external doors
- Air conditioning
- Furniture
- IT trunking
- Landscaping

WETHERBY RACECOURSE

9.6M X 6M 4 BAY DOUBLE STOREY BUILDING

"Your ability to prefabricate the buildings to the exact specification off site, and your commitment to delivering the building on time and your assistance setting them in position was a tremendous boost to the contract and allowed the racecourse to continue racing whilst the new stand was completed."

Graham McFarlane, Project Manager

Wetherby Racecourse wanted a new building quickly for press & commentary from an ideal vantage point i.e. as high as possible!

As part of the design for a new stand at the course they contracted Britcab to supply & install a two storey modular building during the construction phase of the stand. We installed the building directly onto the steel framework of the stand and completed the building safely at great height with all logistics and site conditions taken into account. The new building was then used for a key race meeting in October 2016 prior to completion of the new stand. The building was then clad externally to match the new stand with the finished building blending in to the completed stand construction.

The client was more than happy with the design & communication throughout the process from enquiry to completion.
