Intratone produce a wide range of telephone based solutions for door entry and access control. The latest offerings consist of a GSM range of products which will provide you with a top quality solution for every situation, especially those tricky jobs where new cables is just not an option.

All of the GSM products offer real time management for updates and events downloads, to monitor who has been accessing secured areas.

Combine this with a very competitive package for line rental and call charges with a fixed contract per month, you do not have to worry about exceeding your minutes or unexpected large bills. Some products even come with a single payment for life time contracts, and **that is an offer that cannot be beat.**

Door entry

Intratone offers a range of solutions from simple audio only intercoms, to video via 3G solutions. With no need to install a receiver unit in each apartment, you no longer have to worry about special handsets to meet DDA requirements as Intratone will work with existing specialised landline and mobile phones.

Each unit can be programmed before visiting the site

Access Control

All digital Intratone panels come with access control integrated as standard, whether you use just the coded entry solution or choose to take advantage of the built in proximity reader.

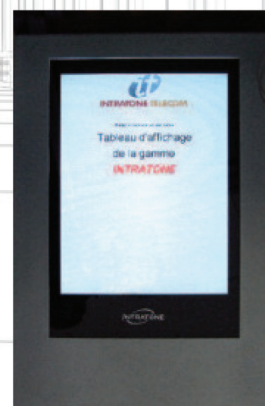

Intratone also offer a range of stand alone access control units, which offer real time updates and activity downloads through the 3G GSM network. And some very attractive contract deals for the GSM

Informative Displays

Designed for modern property owners and managers, the Intratone Informative Display allows you to post real time information on a digital notice board.

This reduces the amount of time spent travelling between sites to post notices and allows your tenants to always have the very latest information delivered to them
