## When thinking BIG FORKS think INVICTA

Whether it's a 1.6 Ton or a 40 Ton Forklift when it is off the road due to fork failure, time is of the essence in getting back up and running and on budget, this is where Invicta are head and shoulders above its rivals. The standard ITA forks up to 8 Ton are available from stock, but what separates Invicta from the rest is our diverse stock of BIG BLANKS up to and including 40 Ton capacity.

This stock gives Invicta a distinct advantage when a quick response, with the required knowhow, to get that all-important Forklift back up and working and of course, sometimes more importantly, within budget. Quality and service play a large part in your decision-making, but cost must also be considered and we at Invicta except that this can lose or land the order. Therefore in certain circumstances we are able to re-use the furniture off the existing forks and transfer them onto the new forks, thus keeping the costs down.

Please take a look at a small selection of different fork configurations that we manufactured for various customers who work within various industry sectors. If you require further information or wish to arrange a site visit please do not hesitate in contacting a member of our dedicated sales team.

### Bolt On Forks

There are a variety of hole centre configurations for Bolt On Forks which are specific to the make of attachment that they are fitted to, with no industry standards as they are with ITA forks. Drillings can be through the front or rear of the forks and either plain or tapped.

### Roller Forks

Roller Forks are predominately used in heavy and hardious applications where large single loads are needed to be lifted such as docks, foundries, portable accommodation or similar. Configuration is again truck specific with full or partial roller and bearing assembly.

### Stainless Steel Forks (Clad or Solid)

Both options can be offered to suit various applications and preferences. Its primary use is in a potentially volatile environment such as a chemical works where a spark can occur when the forks come into contact with the ground or intended load.
