

Illuminated

► Features

- For internal and external uses
- Efficient and low energy consumption
- Enhances and complements corporate branding

► Applications

- Shop fronts
- Interior merchandise signage
- Corporate signage
- Directories and way finding
- Advertising

Illumination can significantly enhance your signage. In addition to the obvious benefit of creating more prominent and eye-catching signs, illumination, together with creative sign design, can produce a number of striking effects. By using different lighting techniques you can add depth and 3-dimensional elements. Examples include halo, edge or face-lit. Graphics can also be backlit giving luminosity and vibrancy to artwork. The use of modern LEDs gives excellent lumen per watt (lpw) efficiency.
