

Nickel

Finish

# Nickel Finish

## The ultimate zinc free coating.

An additional coating which is designed to give a zinc whisker free finish. Providing a peace of mind protection for indoor raised access floors. By applying this specialised coating to our top-quality pedestals, it offers a protection like no other.

This coating eliminates the production of tiny hair line whiskers to break free, unlike a standard zinc coating. In some cases, conductive zinc whiskers can become airborne and be transported into computer equipment. This has been known to cause issues in short circuits and voltage variances. Resulting in catastrophic server failures. Our Nickel coating prevents this from happening. No galvanised reactions take place by using a nickel base product therefore it produces a completely zinc whisker, free coating. The additional benefit of our nickel coating is that glazes the ultimate shine without the need to polish.
