ased in Banbridge, County Down, is a leading specialist in heritage glazing, supplying customers throughout Ireland

heritage glazing, supplying customers throughout Ireland and the UK, and its Slim-Glaze product are particularly

renowned throughout the market and also they have been recognised as the ONLY manufacturer in Ireland that has passed test requirements for these double-glazed units.

The company's highperformance

Krypton-filled doubleglazing units start at just 11mm thick (about the diameter of a biro) and can fit into frames that were only designed for single glazing, or frames that have the traditional timber low sight-line rebate. They also meet the glazing requirements of properties which have listed status.

Over the last 15 years they have been supplying their Slim-Glaze products into many prestigious projects including Adare Manor, Dublin Castle, Primark Belfast, Royal College of Surgeons, Queen's University, Ashford Castle, National Art Gallery, Coolmore Stud Farm, Adare Manor, Hillsborough Castle, USA Ambassador Residence, U.K Ambassador Residence, Dublin Castle, Dromoland Castle, Gilford Castle, Royal College of Surgeons, Clayton Hotel, Hard Rock Hotel, Department of Education, Cashel Palace, Griffith Barracks, Kildare shopping village. McKee Barracks and ESB buildings which saw the biggest undertaking of heritage restoration Dublin has seen.

They have won the RIAI architect choice award for their product at the AGM event held at the RDS Dublin and projects they have been supplying their products into have won multiple awards held by the RIAI each year.

"All our units these units are FULLY certified passing B.S.I requirements and CEmarking Passing the Part 3 standard, notoriously difficult for slimline units, is the latest example of the company's commitment to excellence", as Managing Director Aaron McCreanor explains: There are widespread concerns in the Industry in relation to some lessor known companies in Ireland now manufacturing their own version of our Slim-Glaze units which we were the first in Ireland to start

"Of the two parts of BS EN 1279, Part 2, which governs moisture penetration, is relatively straightforward to pass. Most manufacturers don't have a problem with it.

"Part 3, which governs gas leakage, is much harder. It's extremely difficult to produce a unit that's slim enough for heritage use, yet our units manages that required standard.

Clongowes Wood College, Co. Kildare

More information about these products can be found at www.imcglass.com / www.imcglass.ie

IMC Glass have invested in the design and manufacture of these specialist slim double glazed units that satisfy the requirements of a low sight line to be fitted in traditional timber frames and we are the ONLY fully certified manufacturer of heritage type double-glazed units in all of Ireland.

It is no longer necessary to expect people who live in old buildings not to optimise their insulation. This product provides the alternative to turning up the heating and allowspeople to livemore comfortably in older properties. The Slim-Glaze warm edge spacer technology consists of a poly metric tape that has a desiccant embedded in its structure. It is physically smaller than a contemporary spacer bar and more attractive. It allows the perimeter margin to be kept to a minimum so it can be glazed in traditional glazing rebates.

The double glazing has a perimeter seal from edge of glass to inside of spacer bar of 7mm + or – 1mm. Units can also range from 11mm to 16mm in overall thickness. Large panes up to 1m² only can be manufactured using 4mm spacer, for panes over 1m² please increase the cavity to 6m or 8m depending upon the size of the unit required.

SLIM GLAZE

OUR SLIM GLAZE UNITS ARE FILLED WITH PURE KRYPTON OR XENON GAS

Unlike other inferior products on the market, we only use pure krypton or xenon, not krypton/argon mix, which is less officient. We also use a scalart th

efficient. We also use a sealant that has been specially designed for double glazing. It produces smaller, more discreet seals and is considered the best on the market.

JUST HOW SLIM ARE OUR SLIM GLAZE UNITS?

Our Slim Glaze units start at just 11mm overall thickness... about the diameter of a Biro.
