

BIKEAWAY

**THE ANSWER
TO YOUR
CYCLE PARKING
PROBLEMS**

A fresh look at cycle parking...

Based in Plymouth, BikeAway Ltd has been leading the field as a specialist supplier of vertical stands and lockers since 2001. With all of our products made to order, BikeAway has a cycle storage solution for almost every location.

Lockers

Our vertical cycle lockers are designed to hold 1 bicycle in an upright position. Having installed more than 10,000 lockers in the UK and Ireland, we have built up a wealth of experience to provide units that ideally suit each particular site. BikeAway lockers offer a space saving, secure and user friendly solution to encourage cycling as a realistic form of transport.

This robust locker is particularly suited to urban areas and has been installed in housing estates throughout London for a number of years. They have been so successful that the local authorities return to us time and time again to purchase more.

Space saving

12 BikeAways to fit into just 2 standard car parking spaces.

Security

Of paramount importance, the strength of our lockers is backed up independently by the heavy duty version having passed the attack test required by Standard LPS 1175 as laid down by Secure by Design in conjunction with BRE Global and the Association of Chief Police Officers.

Ease of use

Our unique mounting hoop and ramp allow bikes to be stored safely and securely in seconds, with no metal to metal contact.

Flexibility

There is no limit to the number in a cluster. The overall structure derives strength from the way the units are attached together. These lockers are built on site by our team of fitters and can be installed on any hard standing. The adjustable legs (a feature unique to BikeAway) allow our lockers to be installed on most uneven and sloping surfaces, yet still remain vertical and true to produce a smart finish every time.

Technical information

BikeAways are constructed from 1.5mm thick galvanised steel. The doors are made from 1.6mm or 2mm thick galvanised steel depending on specification. End panels and doors are polyester paint finished. All other surfaces have galvanised finish unless otherwise specified.

Dimensions

680mm Wide
1150mm Deep
1900-2000mm high (legs are adjustable)

Locker management service

BikeAway manages over 1500 lockers, many on housing estates throughout London. Not only do we deal with the administration involved, we also maintain the lockers in full working order. This makes any cycle parking initiative fully sustainable.

Individual lockers

For locations where single units may be required, our Individual lockers are supplied fully assembled ready to be bolted to a concrete base; strengthening gussets are included to reinforce the structure. These lockers can be installed singly or in a row, including back to back and are available in a space saving wedge or traditional cuboid shape.

BikeAway has overcome the problem encountered by other individual units that are vulnerable to being levered open by fitting our doors with hinges and locking points that 'grab' the sides of the locker; a similar principle to how a car door performs in crash conditions. This is a feature unique to BikeAway Individual Lockers and essential to this locker passing the attack test for Standard LPS1175.

Dimensions

<i>Individual Wedge Locker</i>	<i>Individual Locker</i>
715mm Wide at Front;	712mm Wide
405mm Wide at Rear	1142mm Deep
1145mm Deep	1822mm high
1830mm high	

Stands

Our range of bike stands are designed around our innovative mounting hoop that secures the bike in a vertical position, saving a huge amount of floor space and avoiding the common problem of bikes leaning against each other. Products range from a simple wall mounted hoop to single and double stands. All of our products avoid any metal to metal contact between the stand and the bike.
