Capacitive Sensors - Overfill Prevention - WHG

For Containers that contain water-polluting liquids, the Water Resources Act (in Germany WHG) prescribes overfill protection.

The Water Resources Act has the important task to provide the legal basis for the protection of surface waters and ground waters. It serves to protect our environment and sustainability ensures the quality and availability of the important element of water for humans, flora and fauna. The application and compliance with the law is monitored by authorised bodies.

Your advantage:

- Reliable overfill prevention
- Precise level control
- Compliance with the Water Resource Act (WHG)
- Models available with both WHG and ATEX certificate

The capacitive overfill prevention from RECHNER Sensors controls the level. Just in time before the maximum permissible level in the container is reached they trigger an alarm. This means a double benefit for you as the capacitive overfill protection controls the level and offers operational safety. The sensors are certified by the DIBt (Deutsches Institut für Bautechnik). Different sensor designs are available: on the left you can see some examples.

Capacitive Leak - Sensors

Also the leak detection sensors, which are placed in the drip trays serve as a water protection device in accordance with the water protection Act (WHG).

If leaks occur on your plant, the leak sensor detects the liquid that comes into the active area of the sensor and immediately it triggers an alarm.

Your advantage:

- Reliable Leakage control
- Compliance with the Water Resource Act (WHG)
- Models available with both WHG and ATEX certificate

The Certificates

The certificates Z-65.13-572 and Z-65.40-573 are available as download files on our web-site under documents/certificates.

These certificates contain detailed information on how the sensors should be mounted and applied.
