TECHNOLOGY • MOUNTING • APPLICATION**KXS-eXtreme series:****Extremely high sensitivity****Extended temperature range**

**-50°C to
+250°C**

+800°C

The capacitive proximity sensors that make up the Classic-model series (KAS-...) are already established as powerful leaders in today's market. They are well accepted as sensors that are reliable, and there are a large number of versions to suit many applications in the processing industry and throughout mechanical engineering. Nowadays they are indispensable. Important parameters for the user are the achievable switching distance and the size of the sensor. Larger switching distances normally require larger sensors.

It is here that the new KXS/KXA-Systems show their strength. Although one achieves essentially larger switching distances with these capacitive systems, their size is actually smaller.

The sensors of the KXS/KXA-eXtreme Series are based on a different measuring principle, the three-electrode-principle:

- Extreme large sensing distance, up to 10-times the norm
- Miniature sensors from M 5
- Measurement of the smallest changes in capacity
- Suitable for high-temperature areas up to +250° C (ceramics +800° C)
- Duplex, Triplex, Quattroplex operation (up to 4 adjustable switching points in one sensor)

With this Measuring principle, one electrode BE (BE = function earth) is moved to the outside. The protective conductor-potential PE – that means the machine and system potential – is now also used as a measurement electrode (= function earth). The evaluation takes place with remote electronics.

Thanks to the remote evaluation electronics and the housing materials used, the standard types of capacitive sensors of the KXS- / KXA-Systems are suitable for use in high-temperature areas up to +250°. For particular applications, sensors are available in stainless steel / ceramic housings that can be used up to 800° C.

Sensors

Our **KXS-eXtreme** sensors have a cylindrical design with threads from M 5 to M 32

Evaluation unit

The following types are available as evaluation units:

- KXA-5-1-... to connect one sensor KXS-... with one limit switching point
- KXA-5-4-... to connect up to 4 KXS-... sensors with one limit switching point
- KXA-5-1/4-... to connect one sensor KXS-... duplex, triplex or quattroplex application (= up to 4 limit switching points)

Application example:

- | | | |
|------------------------------|---|-----------------------|
| ➤ No target at sensor | = | No output signal |
| ➤ Empty glass-bottle present | = | Output signal 1 |
| ➤ Full glass-bottle | = | Output signal 1 and 2 |

Easy commissioning

It is easy to put the capacitive system in to operation:

Mechanical mounting of the sensor + electrical connection + adjustment = ready for operation.

If the sensor is not screwed into metal, please note that a galvanic connection must be made from the electronics to the protective conductor potential.

TECHNOLOGY • MOUNTING • APPLICATION

DEPENDENT ON THE APPLICATION THERE ARE
TWO MOUNTING VARIANTS:

1. NON-FLUSH MOUNTABLE

= FOR CONTACT WITH PRODUCTS

For the level control of liquids or bulk material in most cases the sensors are used in such a way, that the active surface of the sensor comes in direct contact with the material to be detected.

Dependent on the material to be detected specific requirements to the housing designs have to be considered. Especially for that part which is in direct contact with the product.

2 mounting variants:

Non-flush mountable

Flush mountable

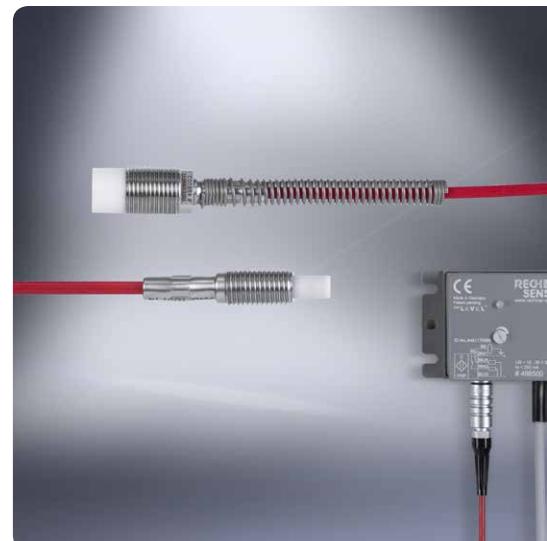

2. FLUSH MOUNTABLE

= AT DISTANCE OR
THROUGH THE CONTAINER WALL

Besides product-touching level control there is the option of level control through a non-metal container wall. The thickness of the container wall should not exceed 4 mm at the place where the measurement is made.

Furthermore the flush mountable sensors are often used for the position control of objects.

TECHNOLOGY • MOUNTING • APPLICATION

3-electrode-principle

One electrode is moved to the outside (BE = function earth)

Maximum torque

In order to prevent damage to the threaded sleeves when mounting, the material and version-dependent maximum torque should be taken into consideration. The values listed in the table are based on the use of the nuts supplied with the sensors.

| Maximum torque | | |
|----------------|-------|--------|
| Thread | PPO | VA |
| M 5 x 0,5 | - | 1,5 Nm |
| M 8 x 1 | - | 4,5 Nm |
| M 12 x 1 | 1 Nm | 15 Nm |
| M 18 x 1 | 3 Nm | 40 Nm |
| M 30 x 1,5 | 8 Nm | 150 Nm |
| M 32 x 1,5 | 13 Nm | 180 Nm |

Maximum screw-in length according to DIN 13

Due to the permitted thread tolerances specified in German standard DIN 13, the maximum screw-in length for threaded sensors should be taken into consideration. Based on this the length of the threaded block for screwing in proximity sensors should not exceed the following dimensions. Where a larger threaded block is used we recommend drilling a blind hole in order to adhere to the maximum screw-in length.

| Thread | M 5 x 0,5 | M 8 x 1 | M 12 x 1 | M 18 x 1 | M 30 x 1,5 | M 32 x 1,5 |
|----------------------|-----------|---------|----------|----------|------------|------------|
| Max. screw-in length | 3 mm | 6 mm | 8 mm | 12 mm | 12 mm | 12 mm |

Wiring

The control wires of the capacitive sensors should be routed separately or screened from large value conducting cables, as in extreme cases inductive peak voltages can destroy the sensors despite the integrated protective circuit. Screened cable or twisted lines are especially recommended for long cable runs > 5 m. Direct control of electric light bulbs should be avoided, as during the switch-on moment the cold current is many times the rated current and can destroy the output stage of the sensor.

Nominal sensing distance according to DIN EN 60947-5-2

The data for the nominal sensing distance is based on the measuring method defined by DIN VDE 0660, Part 208. The respective nominal sensing distance is indicated with a tolerance of + 10 %. The standard measurement plate is square with a thickness of 1 mm and is made of carbon steel FE 360 (defined in ISO 630: 1980) with a smoothed surface and is grounded. The sides are equal to the diameter of the active area of the KAS or equal to $3 \times S_n$, depending on which value is greater. With a different material or a smaller surface of the actuating element, the sensing distance is smaller.

TECHNICAL TERMS

Housing materials

The application of the housing materials used is based on the technical specifications of the material and of the manufacturer. Even though RECHNER Sensors have far-reaching application experience concerning the use of different housing materials, the customer is responsible for checking in each case that the housing material is suitable for the application.

Cable

For the standard models COAX-, TRIAX-, PVC- or PUR-cable are used. One has to take into consideration that the cable should not be moved with ambient temperatures below -5° C. PVC is not suitable for use in applications with oil-based liquids or with UV-radiation. PUR is not suitable for continuous contact with water. For special application areas silicone or PTFE cables are available. COAX- and TRIAX-Cable are not designed for continuous movement / flexible use. When routing please consider the bending radius of minimum 10 x Ø.

Sensing distance Sn

Characteristic value of a proximity sensor, without consideration of production tolerances and variations due to temperature and voltages.

Enclosure rating

IP 54: Protected against dust in harmful quantities, complete protection against contact and protection against splashing water on all sides.
IP 65: Protection against contact with voltage-carrying parts, protection against ingress of dust and water jets.
IP 67: Protection against contact with voltage-carrying parts, protection against ingress of dust and protection against ingress of water when the equipment is immersed in water, up to 1 m depths for a period of 30 minutes.

Voltage drop Ud

Voltage drop is the voltage, which is at the active output of the sensor in the on state.

Repeat accuracy

Measurement of the sensing distance in succession, which is made at constant ambient conditions.

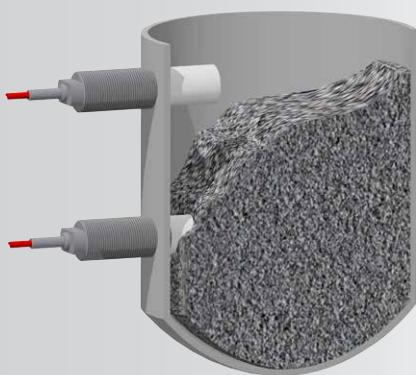

Permitted residual ripple

The permitted residual ripple of the used power pack, used as power supply.

**Performance through
Technological leadership
and Quality**

APPLICATION EXAMPLES

2 non-flush mountable sensors for min/max monitoring are used

Application in a container with granules

Filling level control

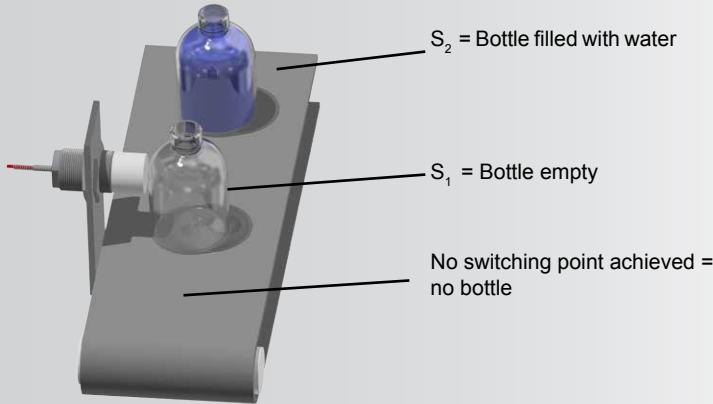

The capacitive sensors of the **KXS / KXA-eXtreme** series are suitable for level monitoring of liquids, pastes and bulk solids in machines and plants, even through non-metallic partitions.

- High temperature range up to +250°C
- For hotmelt / hot glue
- For applications where the classic capacitive sensors are at their limits, the special strength of the **KXS-eXtreme** sensors is needed

Position check

The capacitive sensors of the **KXS / KXA-eXtreme** series can be used as limit switches, non-contact limit switches, for monitoring and positioning, as pulse generators for counting tasks and much more.

A possibility for Duplex-Function, with this example, the limit switching point S2 is indicating "bottle filled with water"

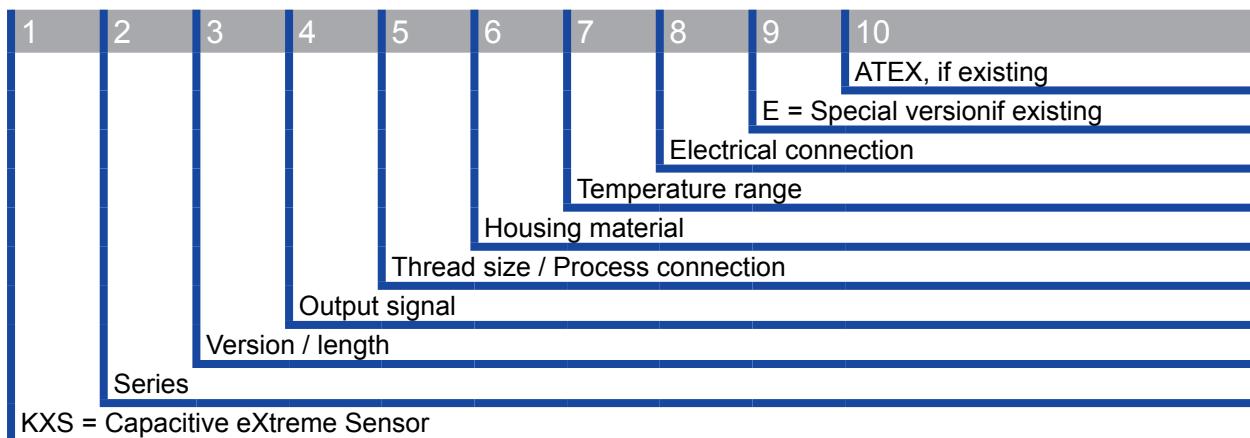

Duplex-application
(with one Quattroplex evaluation unit up to 4 switching points in one sensor)

Series KXS-eXtreme**

Housing Ø 30 mm

- Housing material: PTFE
- For connection to capacitive evaluation units KXA-...
- Extreme large sensing distance
- Up to 160° C ambient temperature

Technical data

Operating distance S_n

Flush mountable

20 mm

Operating distance min / max adjustable

2...30 mm

Type

KXS-250-30/70-X-D30-PTFE-160C-X0E/Y95

Art.-No.

KX 0087

Permitted ambient temperature

-25...+160 °C

Enclosure rating IEC 60529*

IP 67*

Norm

EN 60947-5-2

Connection cable for connection to capacitive evaluation units
KXA-... with plug-in connector

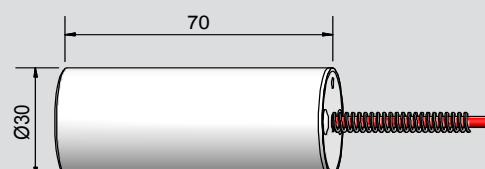

0.3 m FEP, Triax

Housing material

PTFE (FDA 21 CFR 177.1550)

Active surface

PTFE (FDA 21 CFR 177.1550)

*Enclosure rating IEC 60529 for connector on request.

Made in Germany

Y95

**Capacitive sensors
Series KXS-eXtreme**

Housing M 32 x 1.5

- Housing material: Stainless steel VA no. 1.4305 / AISI 303
- For connection to capacitive evaluation units KXA-...
- Extreme large sensing distance
- Up to 250° C ambient temperature

Technical data

Operating distance S_n

Non-flush mountable

80 mm

Operating distance min / max adjustable

5...120 mm

Type

KXS-250-M32/70-X-M32-PTFE/VAb-250C-X02/Y95

Art.-No.

498 005

Permitted ambient temperature

-50...+250 °C

Enclosure rating IEC 60529*

IP 67

Norm

EN 60947-5-2

Connection cable for connection to capacitive evaluation units
KXA-... with plug-in connector

2 m FEP, Triax

Housing material

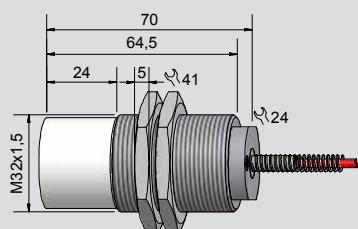

Stainless steel VA no. 1.4305 / AISI 303

Active surface

PTFE (FDA 21 CFR 177.1550)

Accessories (delivered with the sensor)

2 nuts M 32 x 1,5

Y95

**Capacitive sensors
Series KXS-eXtreme**

Housing M 32 x 1.5

- Housing material: Stainless steel 1.4305 (AISI 303)
- For connection to capacitive evaluation units KXA-...
- Extreme large sensing distance
- Up to 250 °C ambient temperature

Technical data

Operating distance S_n

Non-flush mountable

80 mm

Operating distance min / max adjustable

5...120 mm

Type

KXS-250-M32/70-X-M32-PEEK/VAb-250C-X02/Y95

Art.-No.

KX 0022

Permitted ambient temperature

-50...+250 °C

Enclosure rating IEC 60529*

IP 67

Norm

EN 60947-5-2

Connection cable for connection to capacitive evaluation units
KXA-... with plug-in connector

2 m FEP, Triax

Housing material

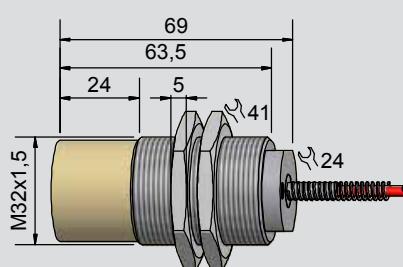

Stainless steel VA No. 1.4305 / AISI 303

Active surface

PEEK (FDA 21 CFR 177.2415)

Accessories (delivered with the sensor)

2 nuts M 32 x 1,5

*Enclosure rating IEC 60529 for connector on request.

Made in Germany

**Capacitive evaluation units
Series KXA-eXtreme**

Housing 46,6 x 74,5 x 30 mm

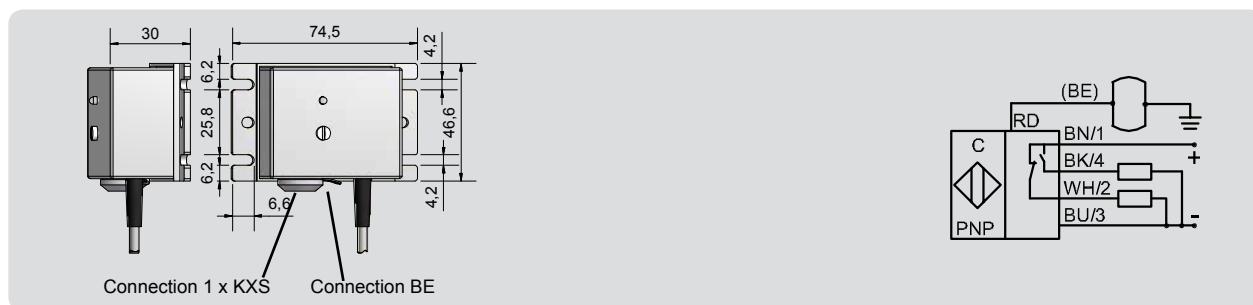

- KXA---MINI for connection to capacitive sensors KXS-...-M5/... to -M16/...

Technical data

| | |
|------------------------------------|------------------------------------|
| Electrical version | 4-wire DC |
| Output function | Antivoltage |
| Type PNP | KXA-5-1MINI-B-P-A-1-Z02-Y90 |
| Art.-No. | 498 503 |
| Operating voltage (U_B) | 18...36 V DC |
| Voltage drop max. (U_d) | < 2.5 V |
| Permitted residual ripple max. | 25 % |
| Operating current max. (I_o) | 2 x 0...250 mA |
| No-load current (I_0) | Typ. 50 mA |
| Frequency of operating cycles max. | 50 Hz |
| Switching hysteresis | ≤ 20% |
| Repeat accuracy | ≤ 1% |
| Permitted ambient temperature | -25...+55 °C |
| LED-display | Green / yellow |
| Protective circuit | Built-in |
| Degree of protection IEC 60529 | IP 65 |
| Norm | EN 60947-5-2 |
| Connection cable | 2 m, PUR, 4 x 0.14 mm ² |
| Housing material | PA |

All specifications are subject to change without notice. (26.03.2020)
