

FenceSecure

Perimeter Intrusion Detection System

FenceSecure

CPNI[®]
Centre for the Protection
of National Infrastructure

FenceSecure can be used on virtually all types of fencing fabric including chain link, welded mesh and palisade. FenceSecure has no topographical limitations. Depending on the fencing type, and to obtain optimum performance, FenceSecure is installed and set up to match with the detection characteristics required for the fence type being protected.

How FenceSecure works

VibeWire piezoelectric sensor cable is applied to the fabric or structure being protected. Audible signals and vibrations generated during an attack are transmitted to the FenceSecure Seismic Analyser for analysis and detection. The analyser detection channels are programmed to identify the signals created by noises and vibrations during intrusion attempts.

VibeWire Sensor cable

Various models of VibeWire are available to cater for different types of application and risk. A full range of fixing accessories is available for fixing VibeWire to various forms of fabric and structures.

FenceSecure

A complete range of installation components is available for the installation of FenceSecureTM onto all types of security fences. Detection zones are planned and installed in accordance with site specific operational requirements and/or the CCTV surveillance specification requirements for local or remote monitoring of the protected perimeter.

FenceSecure features:

- CPNI approved for Government use
- Monitoring of each zone alarm status
- Arming of each zone
- Vibewire - Tamper monitoring of Vibewire sensor cable
- Analyser and accessory housing tampers
- Full function remote testing of each detection zone
- Monitoring of power supplies to each detection zone
- Remote listening-in facility to each detection zone

Setting the standard

We are the UK's leading manufacturers and suppliers of PIDS systems and Electrified Perimeter Intrusion Detection systems. Our range of perimeter security systems is continually evaluated by leading authorities and test houses and in independent appraisals by government departments. Approved for UK Government use, for details contact CPNI.

Quality Assured - Accredited Dealer Network

To ensure that FenceSecure systems are designed, installed and maintained to the correct standards and specifications, every FenceSecure system is supplied and installed by our network of Accredited Dealers

Commissioning and Certification

Following completion FenceSecure installations are inspected and a "Certificate of Compliance" is issued. This provides assurance that all systems are installed to specification to the highest standards for optimum security and reliability.
