DIGITAL INNOVATION

Accelerating the Digital Transformation Journey

Predictable outcomes, expertly delivered

DRIVING DIGITAL TRANSFORMATION

Helping you realise the vision

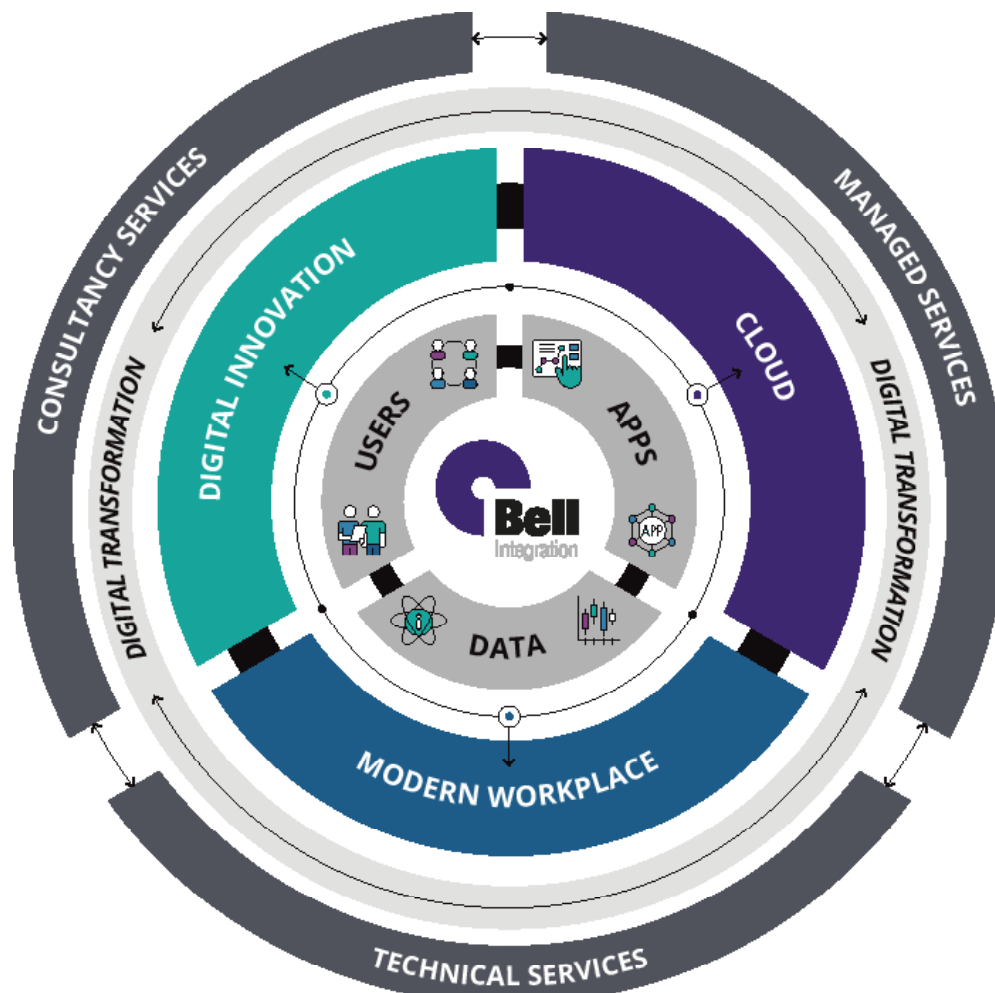

We know that getting digital transformation right requires more than just executive buy-in and financial commitment. It requires a nuanced approach that considers every aspect of the business – including organisational and workforce transformation needs

Aligning digital programmes with business, technology and operational strategies, we help organisations deliver a modernisation agenda at speed – and get transformation right first time.

So they can evolve confidently towards the next horizon in an adaptive and highly agile way, embracing change without fear of disruption or risk.

Our transformation framework is designed to safeguard organisations from falling into the ‘digital trap’ of narrowing their focus too quickly or pursuing a single technology without considering how this will impact users, the flow of information between platforms, or the resilience and security of the enterprise.

We enable organisations to pursue a single cohesive strategy that encompasses the three core technology capabilities that are needed to power effective and continuous digital transformation. It’s an integrated approach that’s focused on three key digital imperatives – users, data and apps.

Wherever you are on your cloud journey, we'll help you determine the right cloud strategy for your business. Whether you're looking to modernise DC systems, migrate to the public cloud – or both – our cloud services enable you to sustainably unlock value and agility using public cloud, multi-cloud and on-premises platforms.

Our cloud experts can help assess the best solution for your application and infrastructure needs. That includes assessing your cloud readiness and advising whether or not to utilise public cloud providers or build and maintain your cloud capabilities elsewhere.

Through on going optimisation of your cloud platform we will help you make smarter architecture choices, that drive efficiency and meet business needs. That includes harnessing IaaS, PaaS and SaaS platforms to extend your infrastructure and improve your operational agility and efficiency.

OUR SERVICES

Cloud Strategy

Cloud Readiness

Cloud Adoption and Migration

Cloud Management

Cloud Optimisation

Cloud Platforms
(AWS/Microsoft)

Our cloud services enable you to **sustainably unlock value** and **agility** using public cloud, multi-cloud and on-premises platforms.

MODERN WORKPLACE

Working 'anywhere and everywhere' is now the established workplace norm. The hybrid nature of the workplace is accelerating and adding new complexities.

We help organisations go beyond simply taking advantage of the efficiency, scalability, resilience and performance of platforms like Microsoft 365.

From putting the power of automation and data insights into the hands of your workforce, creating an integrated digital workplace that gives them instant access to the tools and applications they need to do their job.

We help organisations reinvent the workplace experience for enhanced productivity, collaboration and engagement.

OUR SERVICES

Unified Communications and Collaboration

Microsoft Modern Workplace

Virtual Desktop Infrastructure

End User Experience Monitoring

Unified Endpoint Management

Microsoft 365

Managed Desktop Support Services

End User Compute/DaaS
(Device as a Service)

We help organisations **go beyond** simply taking advantage of the **efficiency, scalability, resilience** and **performance** of platforms like Microsoft 365.

DIGITAL INNOVATION

We help customers to apply cutting-edge digital technologies to real-life business challenges. Whether that's AI and machine learning that can help propel the delivery of new insights, improving business operations, and enabling near real-time decision support that creates a more responsive, efficient and agile business.

Whether you're looking to rethink the way you support people to work, by giving them the right information, at the right time. Or want to leverage the power of big data technologies to deliver accurate predictions of what will happen next and why.

We'll help you deploy a future-viable end-to-end solution that enable you to deliver faster, scalable, secure services in an ever-evolving world.

OUR SERVICES

- Strategic Consulting Services
- Artificial Intelligence Solutions
- Intelligent IT Service management
- Next Generation Support Services
- RPA
- IoT as a Service
- IoT Data Management
- IoT Connectivity Solutions
- IoT Edge

We'll help you deploy a future-viable end-to-end solution that enable you to **deliver faster, scalable, secure services** in an ever-evolving world.

Putting the customer first

Bell Integration navigates the realities of today's IT, resolving the challenges it presents in order to realise opportunities for businesses.

We do this using the brilliant tools we've put in the hands of our outstanding people. Everything matters to us personally – we are an extension of our customer's team, and take full responsibility to deliver on promises.

Cost

The rising cost of IT is a constant issue for any business stakeholder. Smaller budgets and rising expectations of internal and external stakeholders are now the norm. At Bell we are renowned for saving our customers millions of pounds through our pragmatic yet innovative approach to technology. Saving comes from our understanding of the different consumption models, either new or legacy, and creating solutions which most appropriately respond to these challenges. Our services span procurement, transformation, managed services and disposal of assets.

Agility

The need for commercial agility has never been greater for successful companies. A desire to either move to new markets in a swift and efficient way or ensuring you maintain your position in a competitive market is now vital for business success. A company will struggle to achieve commercial agility with stagnant infrastructure and processes. Bell offers unique migration and maintenance solutions plus innovative rental and procurement options to make use of OPEX and CAPEX budgets ensuring companies are agile and competitive.

Risk

Technology innovation can drive your business forward but any change must be delivered whilst maintaining a strong risk profile, either personal, corporate or cyber risk. With these risks in mind Bell has created solutions that combine technology and experience to ensure systems will remain robust throughout changes that are required to maintain and grow market share. Over 23 years of working with some of the world's largest corporations has given us an enviable track record of fulfilling these requirements.

Contact us

With over 25 years of experience and offices across the globe, Bell Integration delivers Data Centre, Cloud and End User services within some of the world's most prestigious customer environments. With capabilities covering technology provision, consulting, project & managed services and asset retirement services, we add value to our customers at several touch points throughout the life-cycle of their IT environments.
