iTower
One lock fits all

iTower

One lock fits all.

Unlock our trademark Security Ecosystem functionality and connectivity for any object you want. Connect anything and everything with a lock – like a locker, tool chest, or a cabinet – to one easy-to-use universal system, with the **iTower.**

In terms of form and function, the **iTower** is small, versatile, and flexible – it fits almost anything made to open and close. But don't let its modest size fool you. The **iTower** is just as smart and connected as its bigger brother, the Pro digital cylinder, bringing the same level of control and features to even the smallest assets.

Connecting lockers or cabinets to your Access Management system comes with many benefits. By simply tapping your transponder to a lock, on a door or a personal locker for instance, you get access to both the correct areas and your safely stored valuables using a single device.

We mean business when we say you can secure anything and everything!

The benefits

- **PLUG & PLAY**
  The **iTower** feels at home in a wide variety of panels, regardless of thickness and material.
- **NEVER STOP LEARNING**
  Review usage history for useful insights, compliant with current privacy policies.

- **SAFETY IN NUMBERS**
  If it's worth securing, it's worth incor-porating into your Ecosystem; enjoy full connectivity and make any asset part of the family.
- **EASE OF USE**
  The standard AAA batteries can easily be accessed and replaced.

- **YOUR LOCK, YOUR CHOICE**
  Easily installed at any angle, with 1-point locking by cam.
- **FOOLPROOF INTERFACE**
  A clean and simple interface makes using and configuring our locks a breeze.

iTower

A uture-proo dgtal lockng system that does it all

Unlock the potential of the Ecosystem.

The Security Ecosystem offers unrivalled flexibility, freedom, and control, allowing you to create tailor-made security setups for any situation, no matter how specific your wishes. Even though every configuration is unique, any environment where access to specific areas or equipment plays an important role can benefit from using the **lock**, and the overall benefits are always the same - the system works for you, not the other way around.

TAKING CARE OF HEALTHCARE

The importance of managing access in a healthcare environment is clear, and guaranteeing the safety of visitors, patients, staff, and all their belongings can be challenging to say the least. Unless you're using the right tools for the job - the Security Ecosystem.

DYNAMIC WORKSPACES

Offices are very dynamic environments, combining areas with restricted access and open workplaces, often neighbouring each other. When employees, temporary workers, visitors, and suppliers, each with varying levels of clearance, are thrown into the mix, the need for a robust system quickly becomes clear.

MANAGEMENT IS KEY

In educational buildings, students, teachers, and employees share rooms, lockers, and storage areas. With a large number of keys continuously circulating, often issued temporarily, tight management is necessary to keep a clear overview. This makes controlling and tracking access to all areas and lockers using a single system invaluable.

CUTTING-EDGE TECHNOLOGY

You'll be hard pressed to find an industry that pushes the boundaries of technology harder than Formula 1, and keeping tools safe and secure is always of the utmost importance, here or in any situation. The **iTower** is fitted with our Ultra-Track system, offering safety measures specifically geared towards tool chests.

A mode for every occasion

Creating your perfect security experience has never been easier.

STANDARD-USER-MODE

The Standard-User mode allows the **lock** to easily be added to the Security Ecosystem, unlocking our trademark features. With multiple options for managing your digital locking system, you have all the tools needed to make everything work seamlessly within your Ecosystem.

Thanks to our advanced managing software, intuitive app, and easy to use Easyflex cards, the choice to program online, offline, or by using data-on-card is yours.

MULTI-USER MODE

Also known as 'Free-Locker mode', when set to Multi-User our locks are perfect for use in public spaces like swimming pools or fitness centres, where visitors choose and use their own locker each session. The special one-time authorization feature of the **locks** Multi-User mode ensures visitors can only secure and open their locker once, and you can easily manage any number of connected locks with the accompanying app.
And, of course, Mifare compatibility is guaranteed in both modes.
iTower

The best of both worlds
### Unifying mechanical and digital locking solutions.

Within the Security Ecosystem, you can easily create tailor-made security to fit any situation, no matter how big, small or complex. Our extensive library of digital solutions is at your disposal, designed to provide you with

uncompromised and future-proof control. The Security Ecosystem even allows you to seamlessly integrate our digital locking solutions into your existing mechanical system. Thanks to the ClipTag - a high security transponder designed to fit

any and all mechanical keys – you can expand our feature-rich digital experience to all your locks. Unify your mechanical and digital systems with **iTower** and unlock endless possibilities – your Digital Security Ecosystem .

Two systems, one key.

It's all about you
But we're here if you need us.

The **iTower** system is designed to work for you, not to make you work. It allows you to create an unbeatable custom security system, no matter how demanding or specific your wishes. At the same time,

we appreciate that setting up a system like this might not be something you do on a regular basis. That's where your trusted security expert comes into play. They know all the ins and outs of our products and will gladly

help you create your perfect security solution. We're always here for you if you need a helping hand; before, during, and long after the installation of your Digital Security Ecosystem.

Product details

Install your **lock** how you want, where you want.

The **iTower** is based on what we call a cam cylinder, a commonly used technology for lockers, letterboxes, and steel or wooden cabinets. The lock is equipped with a cam on the back of the device, which turns 90 degrees when operating the knob. As it is available with many different type of cams, it fits in practically any cabinet.
