## decorative casings and interior solutions

boiler casings

pipe boxing

column casings

interior wall linings

retail interiors

bathroom furniture

boiler casings

Almost any boiler installation can be improved by concealing gas, central heating and flue pipe work with our pre-formed and pre-finished boiler pipe work casings, which are covered by a two-year guarantee.

With a wide range of one-piece and two-piece casing solutions, including jointed and 'factory pre-made' options, they not only provide enormous versatility and choice, but can also be fitted in around half the time of traditional site made alternatives.

pipe boxing

There is no quicker, easier or more cost effective method of concealing pipe work and other building services than our pre-formed and pre-finished pipe boxing.

The range not only provides pre-formed plywood boxing profiles, which can be finished in a range of melamine, laminate and wood veneers, but also includes heavy duty pre-formed metal casings for exterior applications where protection from vandalism and theft are the primary considerations.

column casings

Our extensive column casing range provides a stylish and integrated finish and is the perfect solution for concealing internal and external structural columns simply, quickly and cost effectively.

As our range includes casings manufactured from pre-formed plywood, aluminium and stainless steel as well as glass reinforced plastic (GRP) and gypsum (GRG), we can provide column casing solutions to meet the broadest scope of specifications and project needs including standard and custom dimensions and shapes.

interior wall linings

The Vecta range is designed as a fully integrated and versatile interior finishing system that includes high quality wall linings and lift lobby linings as well as reveals, soffits, bulkheads and skirting to provide the finishing touch to any project.

All Vecta installations are created, produced and installed to meet the specific requirements of every individual project. They can be specified in a range of materials and finishes including natural, brushed, anodised or PPC coated aluminium and stainless steel, together with compact laminates, which can be finished in a wide palette of colours.

retail interiors

Venda is a modular retail interior cladding system that not only helps enhance the look and feel of a store, but also provides stylish, flexible and practical product display solutions as an integral part of this highly versatile and easy to install package.

Using a lightweight and rigid metal framework, the Venda system can be located against any internal wall or as a free standing, self-supporting structure to provide a stable platform on to which the system's decorative fascia panels simply snap and click into place.

furniture & display

Vista is an innovative range of stylish furniture, storage and display solutions that can be readily adapted to meet the unique interior requirements found in hotels, hospitals, public buildings and retail, as well as a range of other sectors.

Manufactured from durable pre-formed plywood, Vista not only incorporates soft curves within its design, but also offers an almost unrivalled palette of finish options, including plain colours, metallics, wood veneers and laminates to provide a versatile combination of style and durability.

## solutions, service and support

We have more than 40 years of experience in the design and manufacture of interior casing products, which is why you can be confident that the products, services and interior solutions we provide will meet your precise project specifications and expectations.

Having easy access to detailed and accurate information is essential during the selection and specification process to ensure that products meet the compliance and performance requirements of each individual project.

To help this process, we've taken great care in developing our website at [www.encasement.co.uk](http://www.encasement.co.uk). This not only provides product dimensions, material specifications and relevant compliance data, such as FSC®, but also make the navigation as simple and quick as possible.

In addition to the dedicated overview and technical sections for each product, the comprehensive 'Tech info' pages provide access to a range of downloads including product drawings, materials and finish information, as well as specification clauses and a wide range of technical product brochures.

Visit our website to find:

- \* Detailed product information on our entire range
- \* Dimensions and material specifications
- \* Finishes options and specifications for each product
- \* Downloadable drawings in DWG and PDF formats
- \* PDF brochure downloads
- \* Standard specification clauses
- \* Project news and comprehensive project galleries
- \* Technical, compliance and sustainability information

Or, if you need further information, just call our team on **01733 266 889**
