YOUR SECURITY SEALED

to prevent unauthorised removal of the glass unit from windows. Help to beat crime and impress your customers by installing PVC Security Glazing Tape, which offers outstanding intrusion resistance at an affordable cost.

The ideal solution for externally glazed PVC -U windows.

Glass can be easily removed from the window frame, however by using our Security Glazing Tape in place of the conventional internal wedge gasket your window frame can be made more secure. A seal with long term weathering, ageing and UV resistance is still provided.

Our Security Glazing Tape is a closed cell compressible foam tape available in either high density PVC or polyethylene (PE) foams. The PVC version offers superior performance due to the greater resilience and structural strength. Both options are coated on each side with pressure sensitive, moisture resistant, cross linked, solvent acrylic adhesive protected by a siliconised paper liner.

Our Security Glazing Tape was one of the first to receive the BS7950: 1997 (formerly PAS011) Security Performance British Standard certification for domestic windows - passing the Glazing removal test with flying colours.
