Mr.
FILL

The smart waste solution

At Wybone, we believe in smart, effective and sustainable waste solutions.

That's why we're proud to continue our strong partnership with Netherlands-based smart waste solution, Mr. Fill.

Mr. Fill: Smart Waste Solution

We're always keen to find new ways of expanding and demonstrating our expertise in the waste market, we believe the Mr. Fill Smart Waste Solution perfectly encompasses the brains and brawn of what we hope to achieve!

Not only has our long-standing partnership made us the first UK's sole distributor of this exciting technology, but it's also made better with its stylish design and user-friendly features.

Two Sizes To Choose From

Mr. Fill comes in sizes 120L and 240L with the options for wheelie bin or bin liner, so you can find the right size for the ideal location that suits your preferences.

Easy To Use

Using Mr. Fill has never been easier. No need to use your hands to open the flap, simply press the foot pedal that's been made with durability in mind.

Fill To Your Heart's Content

The bin has a compacting force of 600kg no matter the waste type. This can compact waste from one-fifth to one-seventh of its size to avoid frequent emptying.

Automatic Lock

Staying on top of bin maintenance in busy, public areas can be tricky. Mr. Fill has a three-stage, colour-coded fill level indicator. When the indicator is red, it locks itself.

Smart City Manager

The Smart City Manager is a monitoring system that registers the status and usage of your waste bin. This means you can find out how often your bin is being used and when it needs emptying.

Audible Thank You Message

It's important to give back. Mr. Fill has an optional feature of adding a personalised 'thank you' message for the public when disposing of their waste.

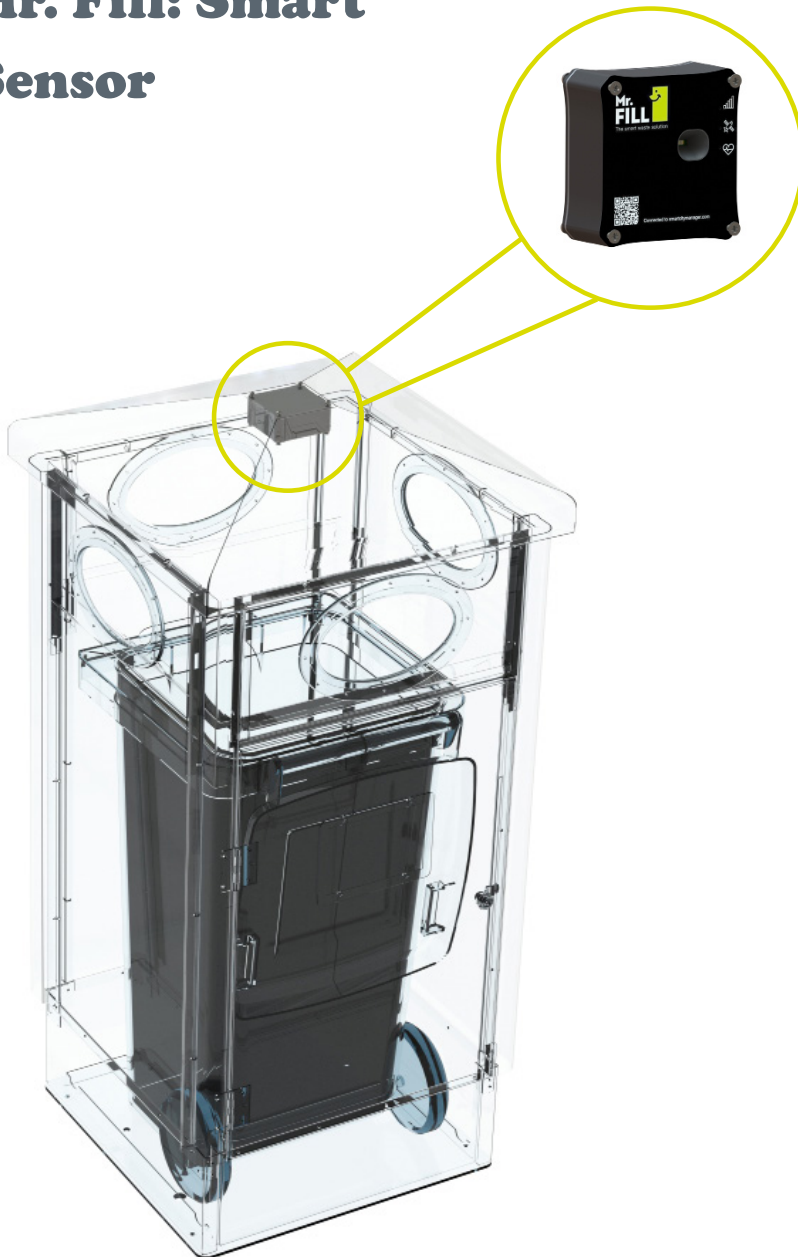

Innovative solar technology

With a great return on energy, the smart infrared technology enables energy to be collected without direct sunlight.

The Mr. Fill Smart Sensor is a smart (no pun intended) sensor device that you can attach to almost any litter bin. It collects information on one data platform: the Smart City Manager.

Manufactured with high-quality components to maximise performance, the smart sensor lets you know how full the bin is at any given time and whether there are any potential hazards or blockages in the bin.

Mr. Fill: Smart Sensor

Does The Hard Work For You

With the smart sensor doing the hard work for you, you'll know how often your bin is being used and when it needs emptying.

Strong Battery Life

Make the most out of your smart sensor with a battery life of five to ten years with daily usage.

Withstand Any Weather

Mr. Fill's sensor can withstand any rainy weather conditions while remaining in pristine condition. It's also designed to work in extremely varied temperatures.

Track The Location Of Your Bin

The built-in GPS tracks the location of your litter bin, 24-hours a day. This means that operatives can easily find your compactor when it's ready for emptying.

Excellent Data Storage

The data collected by the smart sensor is updated every 10 minutes via the Smart City Manager, so you can be kept up to date frequently with everything you need to know.

Cutting-edge Laser Technology

The sensor works through laser technology that scans every item that is deposited into the bin, ensuring that accurate fill-level information is provided.

Adjustable Distance Measurement

The sensor's distance measurement ranges from 0-400cm - this can be easily adjusted to give accurate results that best suit the unit.

The Size

The smart sensor has a height of 10cm and a width of 9cm.

We understand that you may want your products to be diverse with additional features that are unique to you. That's why we offer optional additions and artwork so you can get the most out of your Mr. Fill.

Choose How You Want Your Mr. Fill
