

Bolt & Cable Seal Safety Cutter Kit

The Unisto Cutter Kit provides everything you need for the fast and safe removal of heavy duty bolt and cable seals.

The Klauke battery driven hydraulic bolt cutter will remove bolt seals up to 12mm diameter, avoiding the need for long handled bolt croppers that have been known to cause musculoskeletal injury due to the physical power required to cut the steel bolt. The Klauke cutter provides 35kN (approx. 3.5 tonnes) of cutting force at the blade enabling an 8mm steel bolt to be removed in less than 10 seconds. The battery is rechargeable and provides about 200 cuts on a single charge. A spare battery and mains charger is provided as part of the kit.

For the fast and efficient removal of cable seals the kit comprises a pair of Greenlee scissor action cable cutters.

Safety glasses and gloves are also supplied and we strongly recommend these are worn for removal of all types of barrier security seals.

- Safely removes security seals
- Quick and easy to use
- Highly portable and lightweight
- One touch / one hand operation
- Protects user
- Removes the need to use cumbersome bolt cutters
- More precise operation
- Battery operated (rechargeable)
- Sizes up to 12mm diameter

"The boltcutters have been a revelation! They are very popular. Many people are sceptical before using them, but once in use, they love them, literally. One manager in particular really thought they wouldn't make a difference, but recently admitted to me that they were excellent, safer, more efficient and another couple of managers were joking about the old days of using massive metal boltcutters! – I'd say there were few things on campus that have had such an impact"

Hannah Frost, Health, Safety and Environment Compliance Officer at Dixons Carphone Group.
