

Infrared Monitors

Alert-It P162 Motion Detector

The Radio PIR Motion Detector uses the familiar intruder alarm technique of detecting the movement of a human body by infrared, however the unit is specifically designed to offer the functionality required for the care of handicapped, frail or infirm and can be disarmed by using a key fob.

The unit can be mounted above a door way to monitor entry/exit and is also perfect for monitoring corridor or doorway use (and can even ignore small pets). On detecting motion the unit can trigger a Nurse Call system via the normal wall socket.

Fall Savers Passive Infrared Monitor

The Fall Savers® Passive Infrared Monitor uses infrared detection technology to help carers reduce the risk of falls. This monitor can be mounted on a door or by the bedside to trigger an alert when a person breaks the infrared beam. The Infrared Monitor is a great alternative for when carers determine that the use of sensor pads is undesirable. This simple to use monitor comes with a swivel bracket for easy mounting and adjustable positioning.

Alert-It P162 Motion Detector

- Hard Durable Casing
- Free-Standing and Battery Powered
- Disarmed by Using Key-Fob
- 180" Angle Beam Detection

Fall Savers Passive Infrared Monitor

- Low battery indicator
- One year limited warranty
- Two alarm tones
