

Master Bond Inc.

Adhesives, Sealants and Coatings

Adhesives for Aerospace Industry

Our company is a top manufacturer of high performance adhesives and sealants for the aerospace industry. Our line of one and two component systems consists of epoxies, polysulfides, polyurethanes, silicones, acrylics, polyamides, anaerobics, cyanoacrylates and latex systems. Systems cure at room temperature, exposure to heat and upon exposure to UV light.

Our polysulfides are versatile synthetic elastomers which offer a unique set of application and performance properties for use as aircraft fuel tank sealants. They feature superior physical strength properties, chemical resistance especially to fuels, lubricants, water, etc. Master Bond's product line also includes polysulfide/epoxy alloys which combine the adhesive strength properties of epoxy resins with the inherent flexibility of polysulfides to produce a truly unique family of tough, chemically resistant, high strength materials with a wide range of carefully controlled performance characteristics.

With over 3,000 formulations, our products offer you the flexibility to choose the system ideally suited to your project requirements. Including compounds for bonding and sealing transducers, fuel assemblies, metal & fibre reinforced composites, electronic assemblies, radomes & antennas, optical fibers and sensors.
