

# Master Bond Inc.

*Adhesives, Sealants and Coatings*

## High Temperature Resistant Adhesives

Our company presents an impressive array of high performance, high temperature resistant epoxy and silicone compositions for service up to temperatures as high as 316°C (600°F). They include high strength structural adhesives which retain good physical strength properties even after prolonged exposure to unfavorable environmental conditions. Both one and two component compositions are available with a wide range of curing conditions so as to best meet specific

service requirements.

We invite you to take advantage of our "one on one" support policy offering prompt technical assistance from our experienced, professional staff. We will assess your problem and work with you throughout the design, prototype and manufacturing process. Master Bond products are manufactured under strict quality control standards.
