

Master Bond Inc.

Adhesives, Sealants and Coatings

UV Curable Adhesives

This UV adhesive line of rapid cure, one component ultra violet curing adhesive systems includes high performance UV curing adhesives, coatings, sealants, potting compounds and encapsulation compounds. The performance of each application-specific light cure adhesive is optimized for high bond strength, to be durable and offer superior temperature, abrasion and chemical resistance. Master Bond UV adhesives include polyurethane, UV epoxy, polyester,

acrylic and silicone. UV curable adhesives and epoxy offer seconds cure when exposed to a suitable UV light source. Upon UV light cure they exhibit minimal shrinkage. Additionally, the line includes EB and UV curable coatings with an extra-hard, super-abrasion resist for a radiation curable coating.

We work closely with both material suppliers and research institutes to utilize the most advanced polymeric materials and application methods. This assures that customers will obtain products with the latest technology and highest performance tailored to their specific needs.
