

# Passive Stacker

- 5 - 20 mm diameter

- consisting of the following construction:

- Alloy profiles 80 x 40 mm
- Collection tray
- Open profile turnable by 90°

## Technical specifications

Weight: approx. 70 kg at a length of 3 m

## Mode of operation

The material is pushed into the profile by the cutting machine. The cutting or combined cutting and stripping machine gives an impulse to the stacker after every cut. Then the profile is turned pneumatically by 120° so that the material can fall out of the profile opening vertically downwards into the tray.
