

# design, quality & technology

a choice of compact, modular, stainless steel & vandal resistant door entry panels

## IP door entry system

Just by connecting the video monitor & the door entry panel into a LAN, IPlus will start working.

The new IPlus is a peer 2 peer IP solution that runs without a server, making this system powerful yet simple.

IPlus is a multichannel intercom, no more busy signal that makes visitors wait. Built-in image memory and telephone interface will ensure that the tenant will never miss another call.

Thanks to TCP/IP protocol IPlus can run on LAN alongside other devices, distances will not be a problem anymore.

A design for the most demanding high-end customers.

**Golmar has always been a front runner, offering innovative systems and products with high aesthetical standards, with the focus to communicate & to protect.**

# a world of solutions... stylish & innovative

## **Nexa**

the next generation of panel, with easy to install prewired modules, and speech synthesis.

## **Stadio**

the fully modular system that can be custom built to suit any situation.

## Discover our wide range of kits

A careful selection of products and systems to match any requirements for single dwellings and small buildings.

Audio kits with 2 wires or 4+n wires. Video kits, b/w or colour, with 2 wires, 5 wires, CAT5. More than 50 different models available.

**Using the full range available from Golmar we build systems to meet your requirements, with modular or custom made stainless steel panels and a selection of handsets and monitors, we have something for everyone.**
