Digilock is a registered trademark of Security People, Inc. Digilock is patented and protected under one or more of the following US patents: US6791450, US6655180, US5894277, US5886644. Other US and International patents pending. Additional Digilock product information including drawings and dimensions can be found online at: www.digilock.com

Digilock brings style and convenience

into your locker room while enhancing your member's experience. With Digilock your members will be free of keys and you will be free of locker management.

Digilock provides keyless locks for either shared use or assigned use lockers. Users access their belongings with a four-digit user selected code while management access is provided with an electronic bypass key. Digilock is also ADA compliant.

ALL KEYPAD OPERATED PRODUCTS ARE AVAILABLE WITH A STANDARD LOCKING OR HIGH SECURITY PLATFORM

STANDARD LOCKING: The standard locking platform is provided with a $9/32$ " (7.2mm) springbolt or springlatch and is designed to provide basic locker security.

HIGH SECURITY: The high security platform provides a $1/2$ " (12.7mm) deadbolt or deadlatch preventing and guarding against break-ins. When used with a security strike plate your lockers are securely locked. This platform features an optional audit trail that allows management to instantly identify and track all locker activity.

CARD ACTIVATION

This feature is available for shared use lockers with the high security platform and allows facilities to limit the usage of the locks to members who possess a membership card. Your current membership cards can be used with digilock.

SHARED USE LOCKS

Digilock shared use locks are designed for lockers that are shared by multiple users throughout the day. Users lock and unlock any available locker with a user selected four-digit code while management has access with a manager bypass key. When unlocked, Digilock shared use locks will remain unlocked until locked by another user.

Digilock shared use locks are available with a standard locking or high security platform. The high security platform also provides the option of audit trail and card activation. Additional product features include a usage indicator, a low battery indicator, a programmable LED, a programmable automatic unlock and tamper guard.

MANAGER BYPASS KEY

The manager bypass key is the all-in-one tool for management. A simple touch of this key to the key slot provides lock access and will also provide external power to the lock in case of battery failure. (Anticipated battery life is 3-5 years depending on model and usage). A programming key registers up to 25 manager bypass keys to each lock.

ADA USER KEY

The Digilock ADA User Key meets the US Access Board's requirements for ADA compliance with the use of the ADA User Key. Club members with disabilities are issued an ADA User Key that will allow access to any available locker without tight grasping, tight pinching or twisting of the wrist.

ASSIGNED USE LOCKS

Digilock assigned use locks are designed for lockers that are rented or assigned to a specific user. Users access their locker with a four-digit programmable user code while management has access with a manager bypass key. Digilock assigned use locks are available with a standard locking or high security platform. Additional product features include a low battery indicator and tamper guard.
