TAMLO - ChatterBox Line Level Output Adaptor

The ChatterBox Line Level Output Adaptor converts the speaker level output of the Chatterbox PCB to a lower "line" level for connection to a separate amplifier.

The Chatterbox's internal speaker wires should be disconnected from the Chatterbox's PCB and suitably insulated.

The Green and Orange wires from the TAMLO can then be connected in place of the speaker wires.
The Green wire connects to the Speaker -ve on the Chatterbox PCB.

The Orange wire connects to the Speaker +ve on the Chatterbox PCB.

The TAMLO provides a mono output via the white RCA socket.

The output volume can still be adjusted using the volume adjustment control on the PCB.

TAMLO

Chatterbox Connection Details

Power: Note that +ve must be connected to both the Amp and Logic terminals.

+12vdc (Amp)
+12vdc (Logic)
-ve
