

Aidalarm Pool Alarm System ●●●●●

Based on the A600P controller, this single zone swimming pool call system is designed to provide an emergency calling facility from a pool side to a supervisor's location.

The single zone pool alarm is available as a kit A600PKIT, the single zone system is ideal for smaller pools requiring only one general area of emergency call cover. One additional sounder beacon may be added to this system along with as many call points as are required.

Operation

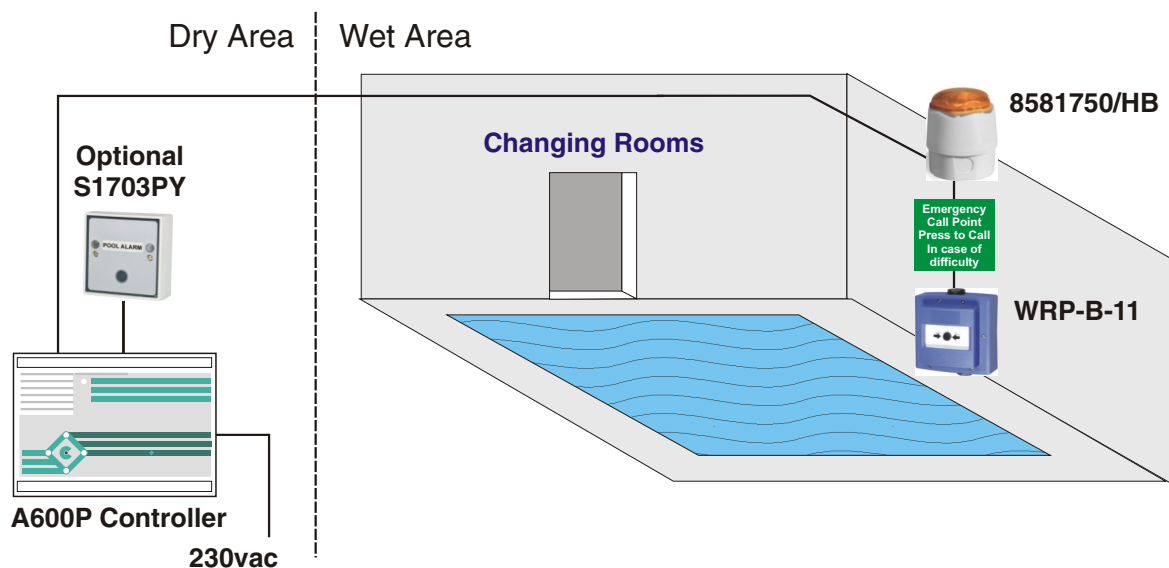

To generate a call the user simply operates the poolside call point WRP-B-11. An audible and visual warning is given by the controller and the sounder beacons connected to the system.

Sounder beacons are silenced by pressing the silence button on the controller. The panel will then bleep every 60 seconds and the beacons will continue to flash until the activated call point is reset and the controller reset.

- **Controller with High Power Piezo Sounder**
- **Four Selectable Warning Tones**
- **Mains Powered with Standby Batteries**
- **Audible & Visual Signalling to Remote Point**
