

PINPOINT®

protecting people at work

Staff should be safe at work. Despite most organisations' stringent 'zero tolerance' policies towards workplace violence and abuse, there are still people at risk - particularly within service areas such as healthcare, education and hospitality.

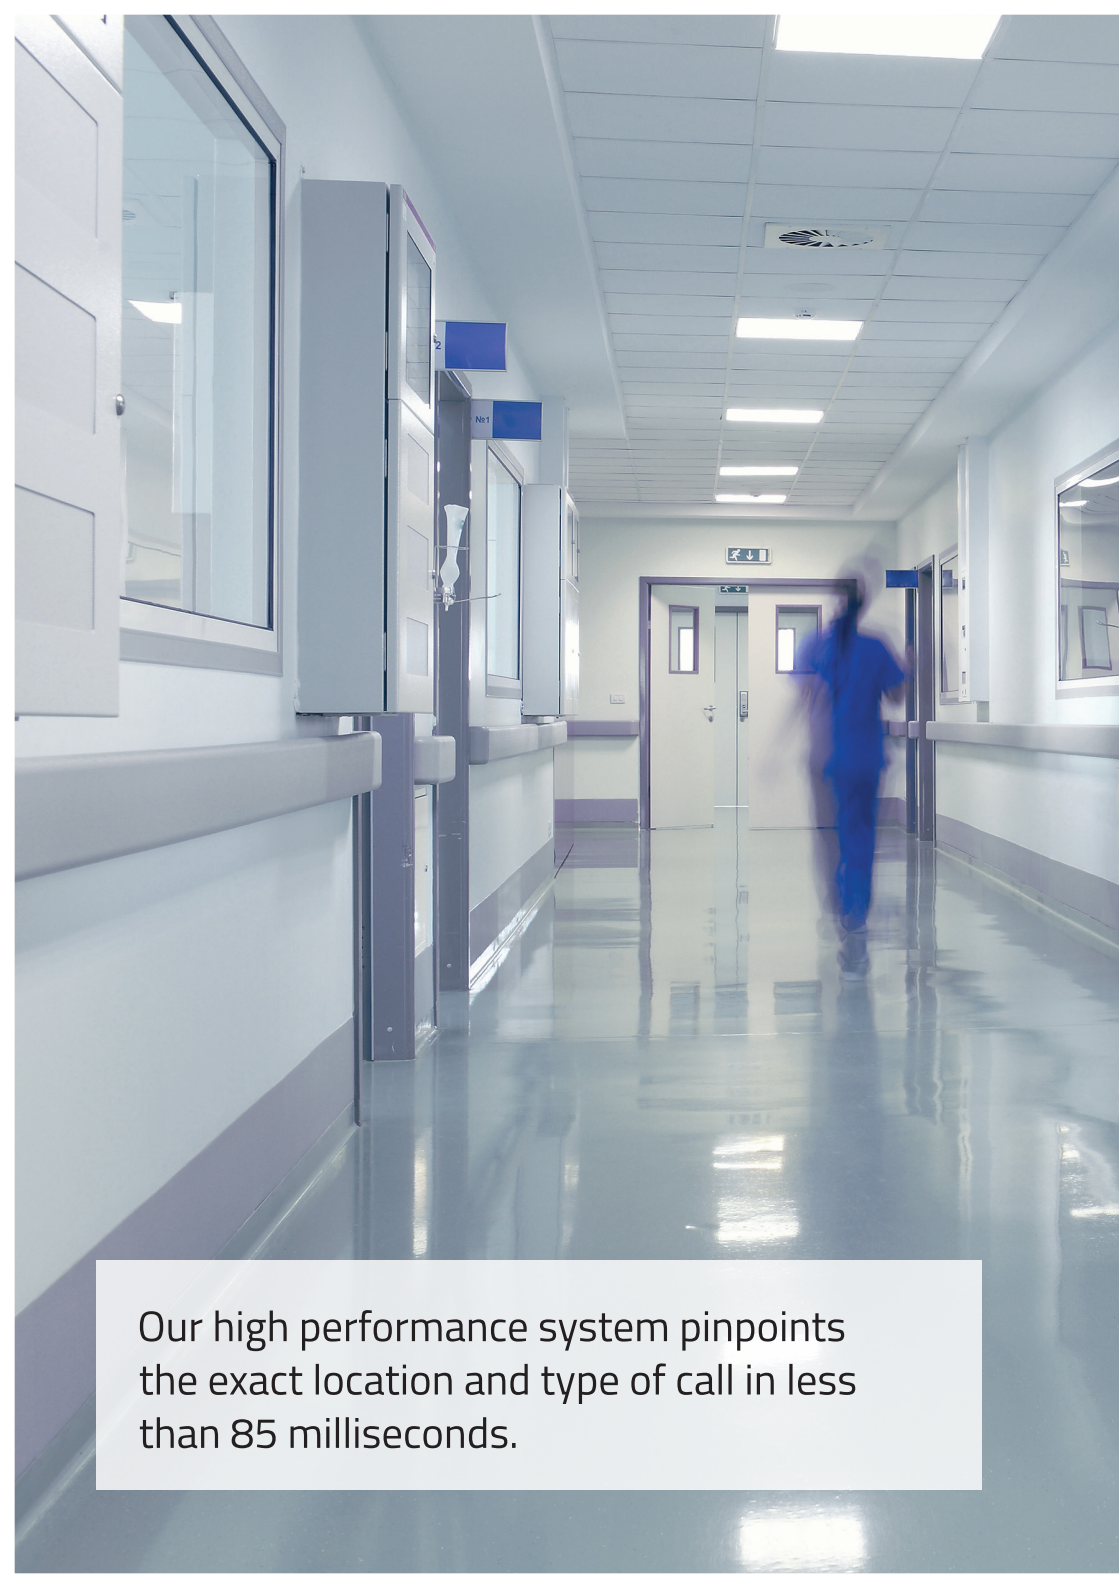

At Pinpoint we want to protect people in the workplace. From our beginning we have been dedicated to designing, developing and manufacturing staff safety systems; delivering the highest performing products of practical value to all our clients with our exceptional level of service and reliability.

Security and peace of mind

For over 25 years, Pinpoint has created reliable, easy-to-use systems for protecting staff in the workplace. From our starting point in Leven, Scotland, our family run business has

installed and implemented thousands of staff safety systems bringing personal safety and peace of mind to businesses throughout the UK and internationally in Ireland and the USA.

Our high performance system pinpoints the exact location and type of call in less than 85 milliseconds.

Our products

Pinpoint systems have been designed to provide an instantaneous response when staff need it most.

From ID Badges with built in personal alarms, Alphanumeric Display Units to Over Door Lights, to Mobile and Desktop Applications, all Pinpoint staff safety products connect, communicate and perform to protect.

The technologies we use are chosen to provide ultimate reliability in critical situations.

Our systems are designed to be discrete, durable and easy to activate in any situation.

Our products can be configured to suit specific user requirements and have been installed in a variety of work environments, including hospitals, schools, retail outlets and correctional facilities.

Advanced materials

Pinpoint are committed to safety on all fronts. Where possible our products include **Biomaster Antimicrobial Technology**, which reduces the ability of microbe growth. Biomaster ensures effective antimicrobial product protection for the lifetime of the product, reducing harmful bacterial levels on the surface and their chance of spreading.

For more information on Biomaster, visit our website and watch the video:

Pinpoint extended protection

As one of the most respected and capable staff safety systems on the market, we have strong and trusting relationships with the likes of the NHS, The Priory Group and Cygnet Healthcare. But we're also known for security integration. We can provide additional security equipment such as CCTV, access control, patient movement detection and door entry, all of which can fully integrate and communicate with the Pinpoint System.

We can also provide you with the ability to visually control and monitor products at specific sites through our web-based Enterprise Software platform. If you would like more information on this service, please call us on **+44 (0)1333 421706**.

“The Pinpoint System meant we could protect more staff in more areas of the hospital than ever before.”

Martyn Perry, Head of Programme Management Office and Assistive Technology Strategy Lead, St George’s Hospital

“Unlike the previous system, we’ve never had a single instance when it hasn’t raised the alarm. Our staff finally feel safe – they know that their PIT will summon help immediately every time.”

Rachel Blackburn, Head of Care Homes, Millennium Care
