Medizone- Area Service Module

A SUPERIOR MOUNTING SOLUTION

The BeaconMedæS Medizone™ Area Service Module blends seamlessly into the modern hospital environment. The tastefully sculptured profile is complimented by a range of colour options and the fresh aesthetics of the BeaconMedæS ZSU2 - zone service unit.

The Medizone™ is designed for rapid installation and can be surface mounted on a finished wall or flush fitted into a stud wall. Since all piping, wiring and pressure testing is completed prior to delivery, factory controlled quality is assured. The Medizone™ is surprisingly lightweight, owing to a high pressure compact laminate fascia plate and extruded aluminium frame construction.

Medizones can accommodate from 1 to 6 gas services, or 1 to 5 gas services and local alarm panel, using 22mm area valve service units, with the option of 28mm gas assemblies for high oxygen and vacuum flows. The ZSU2 area valve service unit includes an intuitive method of reliable and safe emergency access. A firm tug on the ring pull breaks the front portion of the window free, providing instant unhindered access.

KEY BENEFITS AT A GLANCE

- Superior aesthetics - designed for a modern environment with a choice of 4 panel colours
- Lightweight design for ease of installation and safe handling
- Pre-piped, pre-wired and setup to reduce installation time
- Suitable for accommodating a high number of valves (1-6 gas services) for areas such as Operating Theatres and ICU/CCU
- Bespoke configuration. Manufactured to suit the site specific ceiling height, to ensure optimised positioning of the valves and area alarm panel
- Aluminium, ABS and compact laminate 2nd fix design create a corrosion proof enclosure providing inherent corrosion resistance
- Supplied as standard with our high quality ZSU2 Zone Service Unit and pre-configured Medipoint Alarm System

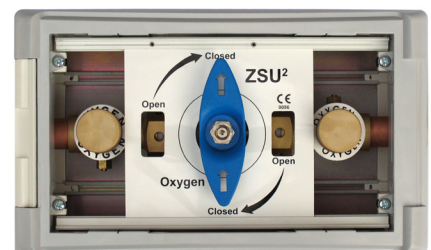

COLOUR OPTIONS

A range of 4 standard colours is available. Colours printed here are for indication only as limitations in the printing process do not allow an exact representation.

ACCESSORIES AND OPTIONS

Coloured fascia panels	White (standard), Cream, Pink or Blue
Double pole fused supply (for alarm)	As required by IEE wiring regulations
Surface or semi flush mounted versions	To match hollow or solid wall finishes
Anti-tamper valve alarm	Recommended for ITU/CCU for audible warning of unauthorised valve entry
3rd Party Alarm Installation	When required to match existing alarm systems
3 Standard Models	<ul style="list-style-type: none"> • Valves only • Valves and pressure switches • Valves, pressure switch and Medipoint alarm system
Floor to Ceiling Model	For instances where the pipeline input and output are required at different heights
28mm Vacuum ZSU2	Required for large vacuum pipeline systems (eg high intensity areas)
