

COUNTIS E

Active and reactive energy meters
and multi-utility pulse concentrators

your energy
our expertise

 **socomec**
Innovative Power Solutions

Energy meters for visible savings

As your first step towards saving energy, energy meters can do so much more than simply provide consumption readings. They now deliver highly accurate measurements along with other electrical parameters essential for managing your energy costs.

Use COUNTIS E meters with COUNTIS ECi pulse concentrators and energy management software from Socomec, and you have a complete system that centralises and makes it easier to track your consumption.

Measuring and centralising your energy data

Now offering so much more than metering and measuring functions, COUNTIS E meters, together with COUNTIS ECi pulse concentrators, allow you to centralise your multi-utility data (electricity, water, gas, compressed air, etc.). This means you can **easily allocate power** by area or by end-use to optimise costs.

Displaying consumption information where it's needed

Simply tracking your energy consumption means you can **reduce it significantly**. All COUNTIS E units have a backlit display and an optional communication output allowing you to view your consumption remotely or directly on the meter.

Guaranteed measurements

COUNTIS E units comply with the MID directive which guarantee accuracy and reliability when metering, a **compulsory function for energy billing applications**.

These products are subject to quality requirements assuring the accuracy of the displayed measurements and have accessories that prevent any kind of tampering.

Socomec, your best asset

Socomec is a specialist manufacturing group and solution provider in the availability, control and security of low voltage electrical power.

A renowned expert in energy efficiency and power quality, Socomec is your single point of contact, from diagnosis to application, for a solution perfectly tailored to your objectives.

With the COUNTIS E, DIRIS A, DIRIS Digiware and associated current sensor ranges, Socomec has developed one of the most advanced measurement ranges on the market, dedicated to improving your energy performance.

COUNTIS E

A complete range of energy meters adapted to even the most demanding of applications

GAMME 592 A

COUNTIS E devices are electrical energy meters.

The COUNTIS E range is compatible with every type of integration, network and load (direct readings up to 100 A and up to 6000 A on the CT).

There are multiple features and benefits with this range: MID metering, various communication protocols, multi-measurements and multi-tariff options.

Adapted solutions to reach your energy goals

The COUNTIS E range perfectly meets the needs and constraints of every electrical system: industrial buildings, medical centres, data centres, infrastructures, high rise buildings...

The benefits of the **COUNTIS E** range

MID metering

COUNTIS E units comply with the MID directive to guarantee accuracy and reliability when metering, which is compulsory for energy billing applications.

Their tamper-proof components prevent fraud and restrict certain functions (no reset). **The COUNTIS E range is EN50470-compliant and MID-certified as "Module B+D", guaranteeing that the design and manufacturing process of products are approved by an accredited laboratory.**

Several tamper-proof features (anti-reset lock, uni-directional metering, etc.) guarantee the reliability of measurements and exclude any kind of tampering.

Multiple communication protocols

COUNTIS E devices incorporate a pulse output or Modbus, M-BUS or Ethernet communication ports.

This communication feature allows you to:

- centralise your consumption,
- configure devices remotely via the Easy Config software or web server,
- access up to four tariffs (four time slots) to track your energy consumption in more detail,
- measure more electrical parameters: I, V, P, Q, S and PF.

Modbus TCP (Ethernet)

Pulse

Modbus (RS485)

M-BUS

Quick setup

With the Easy Config software you can easily create, edit and save COUNTIS E and COUNTIS ECI settings.

It offers the following features:

- set up a new product offline,
- back-up the configuration to your PC,
- transfer the configuration to a device via the communication port.

SOFT 038 A

Multi-measurement

Display up to 20 electrical parameters with partial and total energy meters. Partial counters can be started, stopped or reset to get specific and targeted energy consumption readings.

Multi-tariff

With multi-tariff readings you can measure your energy at various time slots (peak, non-peak) or read your energy from different sources (normal, backup supply) on a single meter.

Connection control

COUNTIS E devices are protected against phase/neutral inversion and can detect wiring errors. Installation and commissioning is quick and the meter is guaranteed to operate correctly.

Expert Services

Technical site audits, solution specifications, advice, commissioning, maintenance, training, etc.

Our Expert Services team offers customised support to make your project a success.

COUNT 228 A

Web server function

Single-point web server

These products have an Ethernet port with an integrated web server accessible on a standard web browser (Internet Explorer, Firefox...).

With the web server function you can:

- monitor electrical units,
- view your energy consumption,
- configure the meter's main parameters,
- View and export energie values to CSV format (automatic export via FTP).

COUNTIS
Modbus TCP.

COUNT 332 A

SOFT_044 A

SOFT_045 A

Multipoint web server

With the DIRIS G gateway used in applications with multiple metering points, you can:

- monitor up to 32 devices (via the web server),
- measure the parameters of your facility in real time (I, V, F, P, Q, S and PF),
- view the energie values (total and partial metering),
- record measurements and consumption (stored for up to 1 year),
- export consumption data to CSV format (automatic export via FTP).

DIRIS G

DIRIS G 006 A

SOFT_027_A_1_FR_GAT

Real-time display.

SOFT_028_A_1_FR_GAT

Consumption monitoring.

Also available

Products suitable for existing sites and applications that require the implementation of multiple multimeter circuits.

RETROFIT & DIRIS Digiware range.

GAMME 593 A

Also available

Wide range of 5 to 5000 A current transformers to support Socomec counters and meters.

Control your costs and improve your energy performance

Find out more about N'VIEW, the new 100% cloud service for your energy performance management. N'VIEW offers a wide range of features to give you a user-friendly and intuitive analysis of your energy consumption and help you optimise your costs.

COUNTIS Eci pulse concentrators

These units can collect and store real-time pulses emanating from water, gas, compressed air and electricity meters, or analogue sensors (light, temperature, wind...). All data can be centralised and managed by a software solution dedicated to managing your energy efficiency.
