

Nexa INOX Audio KIT

This kit has a 3mm thick ANSI stainless steel panel of modular design. Designed for ease of installation with internal modules connected through flat cables and pre-wired buttons, all housed under a hard core skin. The information window is manufactured in polycarbonate with steady illumination at the door panel through white LED's.

Kit features: The speech amplifier module supplied is for a single entrance installation. The kit is supplied with a basic handset: model T-500. A surface mounting handset in white colour ABS finish, with multiple fixing points. The handset has an electronic call and lock release button.

Kits are supplied with 1 handset per apartment.

Use 12Va.c. lock release - not supplied.

Kits are designed and supplied for connection with a 4+n installation
Kits come as standard with a flush mounting panel.
Other connection and mounting options available.

Up to two additional handsets; T-500 or T-502 (with additional pushbutton) can be used in the same apartment without additional power supplies.
