NEXA
video kit

This kit has a 1.8 mm extruded aluminium door panel of modular design. Designed for ease of installation with internal modules connected through flat cables and pre-wired buttons. The information / camera window is manufactured in polycarbonate with steady illumination at the door panel through white LED's.

The camera/sound module has an adjustable pan and tilt CCD colour camera with electronic iris and light emitters for night vision. There is a built in video transmitter module which allows the transmission of the video signal over either twisted pair or coaxial cable.

Supplied with Tekna Plus SE Colour monitor, with electronic call. A surface mounting unit with a 3.5″ colour TFT LCD of "A Grade" quality, with brightness and contrast adjustments and detachable telephone cord with connectors. The monitor has preview and auto switch on functions.; privacy on audio, video and door open progresses; plus input for individual apartment push button that saves the use of a separate doorbell.

Kits are designed and supplied for connection over 4 cores + 1 twisted pair. Kits come as standard with a flush mounting panel. Other connection and mounting options available.

Up to two additional "Plus" technology units, audio or video, can be used in the same apartment without additional power supplies.
