Elite Magnetic Catches

Elite Magnetic Catches

The Choice for Excellence

Bunting® Magnetics Europe Ltd. have been at the forefront of magnetic catch design for many years and following extensive customer research have designed our own brand of metal magnetic catches. These unique designs will transform any bespoke kitchen or piece of furniture, whether you want a stylish surface mounted metal catch, or whether you want something that is totally flush and so discrete and sophisticated that your customers will be astounded.

Unrivalled

Our range of Elite® Magnetic Catches continue to expand and be developed. These products are exclusively manufactured by Bunting® Magnetics Europe Ltd and can be either flush or surface mounted. In contrast to other catches, these products will work over a gap allowing near silent operation. The closure of a cabinet should not rattle the dishes. Our Elite® catches feature a unique design which tolerates a gap between the catch allowing for silent closure.

Surface Mounted Range

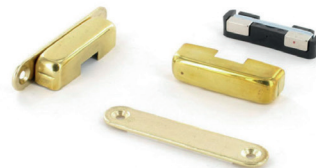

Stylish

The smallest details factor into the overall attractiveness of any space and piece of furniture. Our Elite® catches feature smooth stylish lines and offers no visible fixing holes, screws, pole magnets or fasteners showing. The catch is designed so that the magnet is retained within the design, so it can't drop out and require annoying further customer visits to rectify the problem. These catches do not require intimate contact with the counter plate and provide near silent operation.

Available in chrome, brass or black nickel and in 2kg or 5kg holding forces.

Elite S2 product range, dimensions 42 x 11 x 11 mm, with a 2kg holding pull force

Part Number	Description
CA268B	Elite S2 Brass
CA268C	Elite S2 Chrome

Part Number	Description
CA256A	Elite S5 Stainless Steel
CA256B	Elite S5 Brass
CA256C	Elite S5 Chrome
CA256N	Elite S5 Black Nickel

Flush Mounted

An elegant solution

These high quality magnetic catches are designed to be concealed from view. Some customers prefer a traditional style of “butt” hinges and with our flush magnetic catches a soft close device may be used to give a modern feel to a traditional product. The catch comes in two parts, one fitting into the edge of a door and the other part to be fitted into the frame. The fittings are constructed to provide a flush fit to any door or frame surface. They will hold in-frame doors securely and quietly. All of these products can be mounted to allow them to be visible, or mounted sub-flush so they become totally invisible. The two parts of the catch do not make contact when the door is closed but still provide a suitable holding pull force for the door, either 1, 2 or 4kg pull per catch, depending on the design.

Surface & Flush Mounted

Part Number	Description
BNMSO41KX-M	Elite IF1 Knock In Diameter 10mm x 8mm long 1kg pull hold across a 1mm gap

BNMSO40KX-M	Elite IF2 Knock In Diameter 14mm x 11mm long 2kg pull hold across a 2mm gap
-------------	---
