# SPA TECHNOLOGIES UK

---

**Spa Technologies UK is committed to pioneering and developing unique skin care solutions using natural sources to prevent the acceleration of photo-ageing and environmental stress.**

The “Technology” in Spa Technologies began with research in the marine world, specifically seaweed and algae and has evolved into advanced delivery systems that drive actives and ingredients deeper into the skin to improve product performance.

Our unique serums and creams are formulated by blending natural active ingredients into a 70% food-grade seaweed base. The result is a nutrient-rich product that provides protection against ageing without relying on chemicals.

Seaweed is nature’s storehouse of magnesium, potassium and phosphorous, the building blocks of collagen, which maintain the skin’s elasticity.

Zinc, copper, silica, and iodine, are trace elements that are responsible for the synthesis of collagen, and prevent against further breakdown of cellular tissue. Our biofermentation of marine algae helps to repair and build the collagen matrix restoring tone and elasticity to the skin. And, the newest breakthrough, Solar Photospheres, encapsulates two micro-algae that have the power to protect and repair DNA cellular damage from overexposure to the sun.

Spa Technologies UK is dedicated to delivering effective, natural products that protect the skin from environmental stress, while providing valuable nutrients for optimum health and radiant skin.
