

The Green Office Solutions

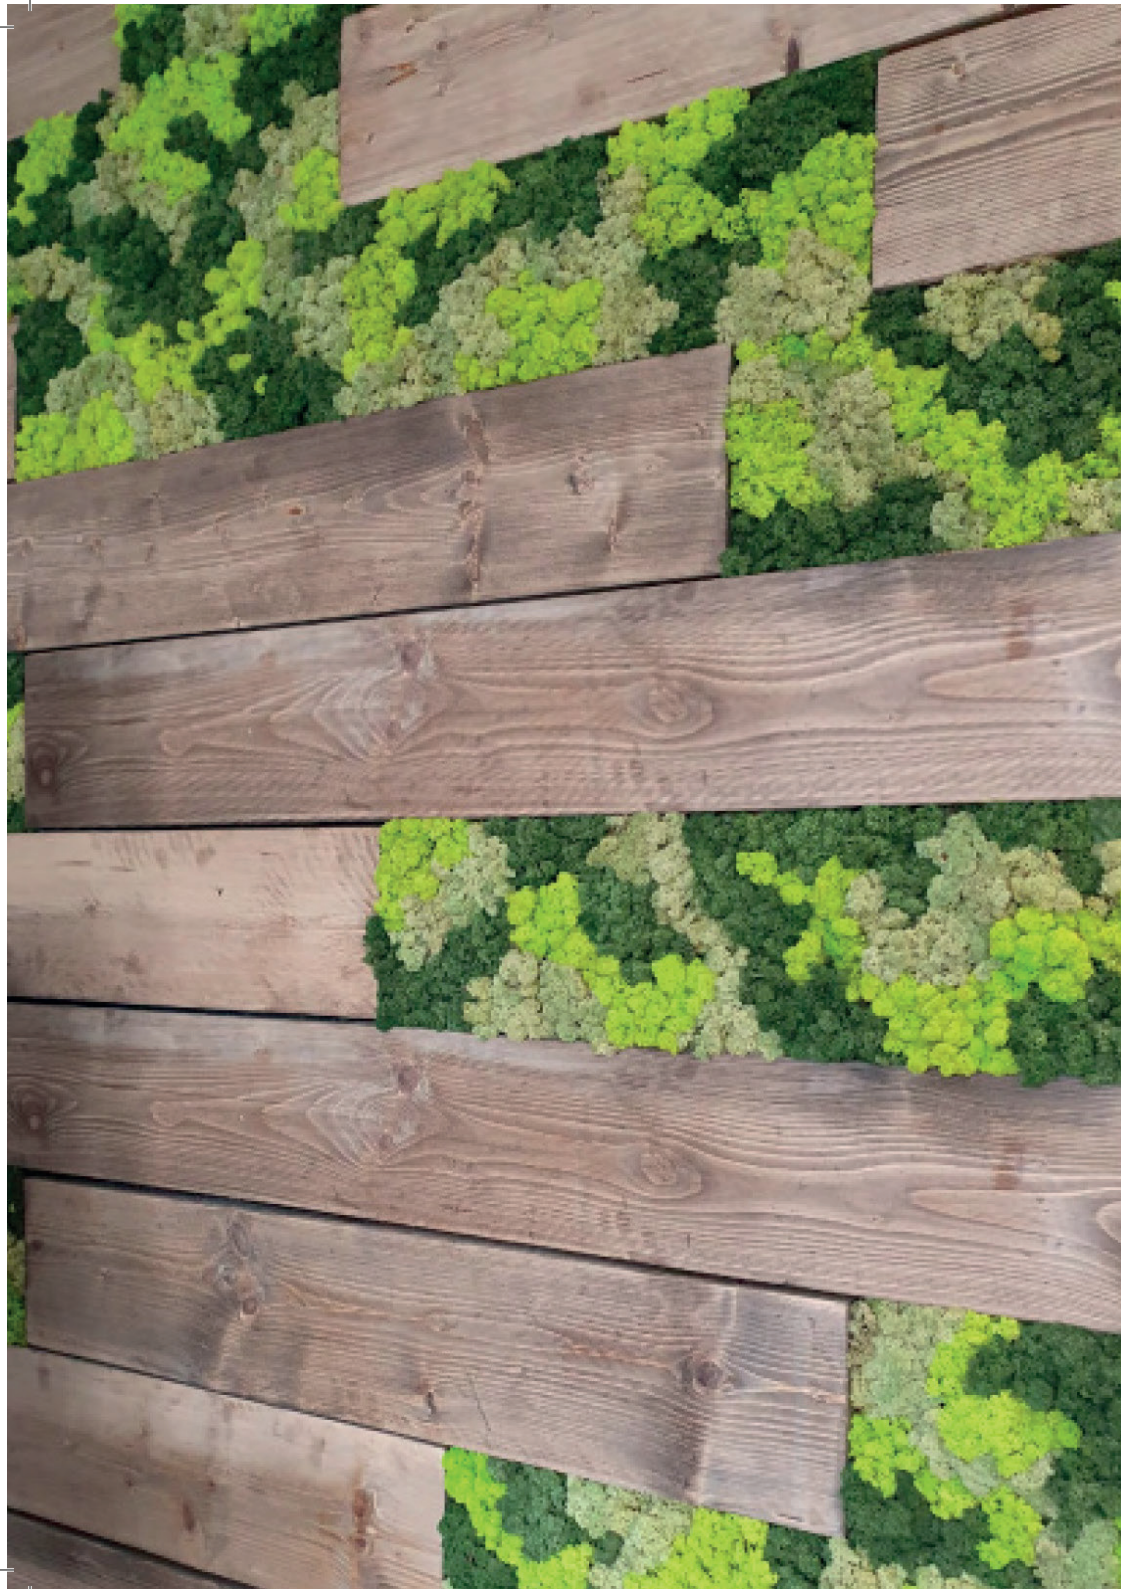

*Biophilic Spaces  
Inspiration*

November 2023

# Introduction

Biophilic design goes beyond traditional aesthetics. It seeks to create spaces that evoke a sense of tranquillity, vitality, and rejuvenation by integrating natural elements and patterns into our built environments. From lush greenery to abundant natural light, these spaces inspire and uplift, offering a respite from the chaos of urban living.

Within the following pages, you'll discover a range of captivating images, showcasing a range of our products that embody the essence of biophilic design. Our curated collection will ignite your imagination, whether you're an architect, interior designer, or simply seeking inspiration for your own space.

Join us as we celebrate the harmonious integration of nature and design and embark on a journey towards creating environments that nurture our well-being, enhance productivity, and connect us to the world outside. Be prepared to discover the immense potential of biophilic design, and together, let's cultivate a greener, more harmonious future.

Wrynose Planter

## Wrynose Planter

- Planting display & zoning for multiple applications
- Welded frame available in 12 RAL colours
- Planter boxes available in our full range of MFC finishes
- Mobile design allowing flexibility of movement
- Available with moulded liners for planting

# Langdale Planter

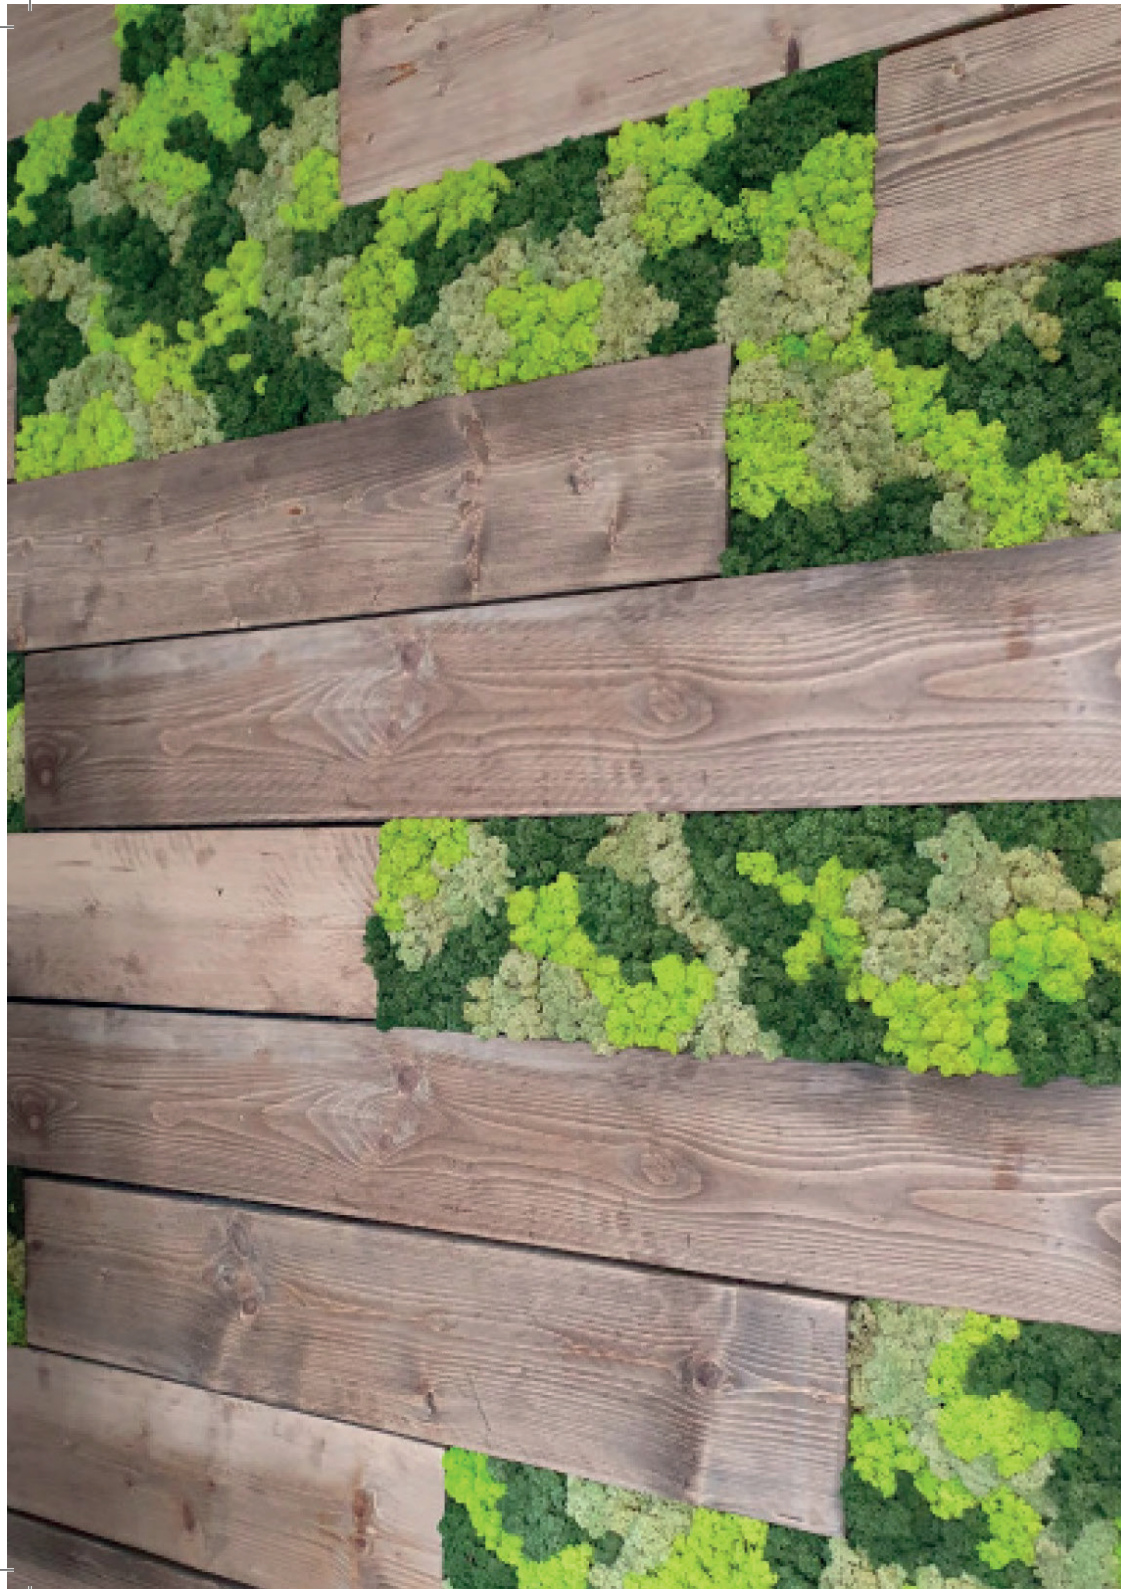

## Langdale Planter

- Planting, storage, display & zoning for multiple applications
- Welded frame grid construction available in 12 RAL colours
- Flush front fittings available in our full range of MFC finishes
- Modular design suited to bespoke requirements
- Available with moulded liners for planting

## Plant-a-Ponic

Here at The Green Office Solutions we are constantly challenging ourselves to look after the environment. Our target is to replace the use of peat in our planters and to use an alternative, more eco-friendly substrate for our plants to grow in. After some detailed research we now use 'plant-a-ponic' a totally peat free substrate, no peat or compost used at all.

Plant-a-Ponic is a pure mineral culture substrate made up of pumice and high-quality zeolites. This results in the substrate being very light and particularly suitable for indoor planting.

Plant-a-Ponic is 100% soil free and using this helps to protect our vulnerable peat-lands, saving our wildlife and reducing carbon loss.

Plant-a-ponic is permanently structurally stable because of its high grain. It has good water storage of over 40% and an optimal air pore volume of over 35%. Its substrate is reusable and has a regulation of pH value. It provides ideal conditions for growing as it can absorb 44% of its weight in water.

Plant-a-Ponic is a circular product which means it can be reused and recycled infinitely. The zeolites save nutrients which are then released back into the plant when needed.

Plant-a-Ponic is environmentally friendly being totally peat free and helps preserve the ozone layer. It has a clean system with no soil, no mess, and no compost-borne disease or pests. It also results in healthier plants from aerated root structure meaning that the plants will grow better creating more humidity and cleaner air.

'Plant-a-Ponic has a very good water storage capacity and a high nutrient storage asset. So, the substrate is very light and especially good for indoor greening'
