

STYLEman365 ERP

Global ERP for the apparel industry

STYLEman365 ERP is the leading Enterprise Solution for Apparel, Footwear and Accessories companies. Combined with the STYLEman365 PLM Product Lifecycle Management system, it provides complete Design to Delivery capability for items with colours and sizes. It supports multiple companies, divisions and brands, and runs 24/7 to cater for today's global businesses. STYLEman365 can also be translated into Windows-supported foreign languages. It is available both as a cloud or locally-hosted solution and on a rental (SaaS) or licence purchase basis.

STYLEman365 ERP covers the main commercial activities for Manufacturers and Importers of soft goods, and the multi-channel distribution through Wholesalers, Resellers and direct Retail to the public. It has a familiar browser-based interface, and the ability to maximise the amount of the screen being used for data. This familiar look-and-feel makes STYLEman365 ERP easy to implement, as most staff will have some experience with similar systems.

STYLEman365 ERP is a comprehensive management system that can be configured easily for different types of business, and integrated into other best-of-breed systems through user-defined interfaces. It has comprehensive data import facilities to assist with data migration from current systems, and user defined data exports to Microsoft Excel for formatting, creating pivot tables and graphing. There are also summarised tables held within the database specifically designed for Business Intelligence tools.

STYLEman365 ERP Intelligent Integration

Integration

Whilst STYLEman365 ERP aims to cover the vast majority of your system needs, these days it is often one component in your systems landscape and may often need to integrate to other systems, either in house or up and down your supply chain. STYLEman365 ERP comes with our own OpenAccess Import and Export suite, which simplifies the process to one of simply mapping input and output fields; all the data validation takes place within STYLEman365 ERP, default values can be supplied where necessary and only valid data is allowed to update the database.

Office Integration

Data is presented in STYLEman365 ERP in table form, where it can be viewed, sorted, edited and even multiple records changed at the same time. The data can be passed to Excel at the click of a button, so that the power of the system can be used to format, Pivot or Graph it. Email integration comes as standard, so that periodic reports can be scheduled and emailed automatically to the recipients. Customers and suppliers can have their documentation (for example, Invoices and Purchase Orders) emailed automatically.

Look and Feel

Designed to mimic the experience of popular applications like Microsoft Office, STYLEman365 ERP delivers robust functionality that is easy to learn and use. The entire application uses navigation concepts like Action bars and Tabs to navigate throughout the application, and view and manipulate data through Excel-like grids. You can even modify and save multiple records without changing screens. And when you need the additional power of Microsoft Excel to view and report your data, you can export to it with the click of a button and create Pivot tables and Graphs as needed.

The STYLEman365 ERP user interface has been designed with productivity in mind, and allows the user to utilise all of their available screen space to view and update data. The system even allows the screen to be split to view multiple records for comparison purposes, or to copy data. The powerful table displays allow the user to sort and summarise key data right on the screen, rather than having to generate endless reports. Rich, context sensitive controls give users appropriate functions throughout the application.

Business Intelligence

The powerful STYLEman365 ERP database is optimised for transaction processing, but also has key management data maintained in summarised format. This allows STYLEman365 BI (Business Intelligence) tools to summarise data in real time on the STYLEman365 ERP Dashboard, in the form of dials, gauges, graphs and tables, all of which can be exploded to review the underlying data.

Data Migration

The ability of STYLEman365 ERP to import and validate data means that implementing it can be a rapid and relatively painless process. Typically, data for import is reviewed in Excel and cleansed where necessary. Then the input data is mapped into STYLEman365 ERP and any default values required are established.

Technical Notes

- Thin client browser-based application
- Uses Telerik/Kendo Widgets, JavaScript, HTML5, CSS3 and OpenEdge Database
- Can use Chrome, Firefox, Safari and Edge browsers
- Available on Cloud or locally-hosted platforms
- Can split database and application across multiple servers for scalability
- Can use both Windows Server and Unix/Linux platforms for database
- Can use Server replication with automated failover when 24/7 availability is a must

STYLEman365 ERP Functionality

Range Management

Styles may be created and maintained in single or multiple markets simultaneously.

- **Multiple Related Companies**
- **Central Style Maintenance**
- **Local Customisation**
- **Sample Control**
- **Range Rationalisation**
- **Integrated with STYLEman365 PLM for Product Development**

Management Information

Access and print key information regardless of location.

- **Standard Reporting**
- **Open Access Data Export**
- **Office Integration**
- **PDF Reporting**
- **STYLEman365 BI Module option**
