

A.S.L.S

Advanced Stroke Life Support E-Learning Course

Traditional Stroke Training (the FAST test) can miss up to 20% of strokes. Our ASLS training reduces the risk of that happening!

At the heart of this course is the MEND (Miami Emergency Neurological Deficit) exam which is conducted after the FAST test and reduces the chances of missing a stroke.

Our course was developed in conjunction with the University of Miami, and the NHS!

Our training certificates are endorsed by the UK Stroke Forum and the University of Miami.

The M.E.N.D. exam incorporates all three components of the Cincinnati Pre-hospital Stroke Scale (CPSS) (Speech, droop & drift) & eight additional components from NIHSS:

- Level of consciousness
- Visual Fields Commands
- Leg Motor Strength
- Limb ataxia
- Gaze
- Sensation
- Orientation

Helping to reduce mortality and morbidity in stroke patients!

Annual license.
Learners can revisit to refresh their knowledge or to take ad-hoc assessments!

- Replacing two days of equivalent classroom-based learning, the course provides robust, comprehensive, educationally endorsed knowledge of emergency stroke care management
- Our online course and the skills taught within this Advanced Stroke Life support programme is not available from any other provider within the UK
- The online course takes approximately 4.5 hours to complete

Course Content:

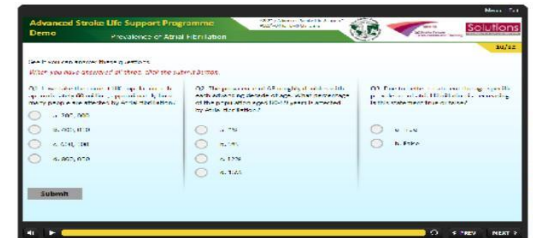

The course includes the following modules:

- Introduction causes and the need for fast actions
- Stroke Facts and Rationale
- MEND (Miami Emergency Neurological Deficit) Exam
- Major Stroke Syndromes and Stroke Mimics
- Stroke Management: Prehospital and General Principles
- Practice Video Scenarios
- Transient Ischaemic Attacks
- Health Promotion & Screening
- Final Assessment

The modules feature clinicians in videos, graphics, stills, animations, and other learning interactions to engage all learning styles.

We understand not every individual absorbs information in the same way!

The course features assessments at the end of the each module, along with a final exam, all of which provide evidence that learners have acquired the necessary knowledge and are able to confidently apply it to their day to day roles.

Customer Testimonial

'The pilot of the ASLS programme saw a range of pre-hospital and hospital clinicians learning in multi-disciplinary groups, side by side. Following pre and post course evaluations there was clear evidence that both knowledge and confidence improved as a result of the programme. One of the key areas where this new e-course is proving to be valuable is in the teaching of the MEND clinical examination technique. This approach to consistent, replicable assessment of stroke and TIA symptoms is key to be able to take emergent stroke assessment to the next level. MEND which supports and is consistent with validated stroke scales such as FAST, CPSS, ROSSIER and NIHSS, crucially allows clinicians to be able to identify stroke symptoms which may otherwise have been missed, allowing more patients to gain timely access to stroke treatment. I genuinely believe that this programme, alongside high-quality care pathways, will save lives and prevent disability'

David Davis, Clinical Informatics Advisor – AHP National Lead
