

CASE STUDY

FELL DYKE COMMUNITY PRIMARY SCHOOL - NE9 7AA

SOVEREIGN
Bringing Imagination into Play

Sovereign were asked to visit the school to look at the MUGA surface which had become slippy. On arrival it was clear that the old wetpour surface had worn away and was becoming dangerous. There were also many trees over the area which were adding to the maintenance and cleaning needed, which was becoming a problem for the school.

» FEEDBACK

Why did you choose Sovereign for the project?

“Sovereign price matched on another quote so we decided to use Sovereign due to the advice given and competitive quote provided.”

What made Sovereigns design better than any others you received?

“Sovereign advised on different surfaces and recommended the needle punch sports surface. The design looked good and the price was competitive.”

How did you find you find the design process?

“The design process was straight forward and quick.”

How did you find the installation process?

“The install went really smoothly with no problems at all.”

» “From Sovereign attending site to discuss what we needed, it was done professionally. You explained all the options available, understood, and had the experience to direct us on what the best option was.

The date for the install was arranged during school holidays and stuck to which was so important to minimise the risk to the children. The team arrived on site on time and completed the install well within the timescales given with minimal mess and distractions. They were all friendly and came and got on with the job in hand.

The surface is great, non-slip and perfect for what is needed inside the MUGA. Even on the frosty mornings we have had lately, the surface is not slippy. It has already been put to good use by the children and we have football coaches using it this week. I am sure it will be an asset to the school in the future.”
