

WHY SPRAY PROTECTAPEEL?

EASY APPLICATION

Applying Protectapeel by spray is an easy solution to surface protection. The surface is protected quickly and precisely - including shaped parts (such as frames) and tricky areas (such as corners).

CONSISTENT COVERAGE

The spray gun allows for more consistent coverage, and achieves the minimum wet film thickness more easily. The applied coating is finished to the most professional standard, creating an aesthetically pleasing result.

SAVE TIME

Not only is the application process extremely quick, but due to the consistency of the coating it actually speeds up the drying time too!
